QA Automation Engineer | SDET | Selenium | Java | RestAssured |4 Years Experience | UI & API Testing | Agile | CI/CD Serving Notice Period | 12.08.2000

Automation Test Engineer / SDET with around 4 years of experience in UI & API test automation using Selenium WebDriver, Java, TestNG, Cucumber, RestAssured, and Postman. Strong expertise in designing scalable automation frameworks, integrating with GitLab CI/CD pipelines, and working in Agile environments. Proven track record of improving regression test coverage to 95% and reducing manual effort, delivering high-quality releases in Agile Environments

---

Experience

Tata Consultancy Services(TCS) **Pune, Maharashtra**
Software Quality Test Engineer *November 2022-Present*

- Worked as **an Automation Test Engineer/SDET** responsible for designing, developing, and maintaining UI and API automation suites for a large-scale financial application, contributing to 95% overall regression coverage.
- Handled UI automation independently using **Selenium WebDriver, Java, Cucumber, TestNG, Maven, and POM**. automated 150+ UI test cases across 6+ major financial workflows and achieved 60% manual effort reduction along with 30% faster execution through framework optimizations.
- Executed API testing and automation using **RestAssured** and **Postman**, creating 30+ automated API test cases with 100% coverage for critical endpoints, improving backend validation efficiency by 40%, and reducing API-related production issues by 20%.
- Built hybrid automation frameworks, implemented dynamic waits, reusable utilities, retry mechanisms, and integrated both UI and API suites into **GitLab CI/CD** for nightly runs, resulting in 25% fewer UI production defects and quicker sprint feedback.
- Actively participated in **Agile ceremonies**, provided estimations, identified risks early, and supported weekly release cycles within a 6-member QA team.
- Mentored junior QA engineers on automation best practices, framework usage, and debugging techniques, reducing onboarding time and improving team productivity.
- Collaborated closely with developers, BAs, and product teams to clarify requirements, reproduce defects, and enhance system stability. Delivered structured test reports and dashboards covering **regression status, flaky tests, and defect trends** to support release decisions and improve delivery confidence.

Skills

- **UI Automation:** Selenium WebDriver, TestNG, Cucumber, Java, Maven, Gherkin
- **API Automation & Testing:** RestAssured, Postman, Newman CLI, JSON/XML Validation
- **CI/CD & Version Control:** Git, GitLab, GitLab CI/CD, Jenkins
- **Frameworks & Practices:** Page Object Model (POM), Data-Driven, BDD, Hybrid Frameworks, Regression, SDET practices
- **Test Management & Defect Tracking:** JIRA, ServiceNow

- **Agile Methodologies:** Scrum, Sprint Planning, Daily Standups, Retrospectives
- **Other Testing:** Functional, Regression, Smoke, Sanity, Cross-browser Testing, end-to-end Testing
- **Browsers & Web Technologies:** Chrome, Firefox, Edge, HTML, CSS, XPath, CSS Selectors
- **Database:** Basic SQL

Project Experience

Financial Application UI Automation

Responsibility:

- Led UI automation for core financial workflows such as account onboarding, password reset, and trade operations (buy, sell, redeem, exchange).
- Developed and maintained a hybrid automation framework using Java, Selenium WebDriver, Cucumber and TestNG, focusing on BDD, stability, reusability, and scalability.
- Automated **150+ UI test cases**, reducing manual regression effort by **60%** and improving test coverage across business-critical modules.
- Implemented utilities like dynamic waits, custom logging, retry mechanisms, and selective test execution, achieving **30% faster UI execution.**
- Followed industry best practices using POM to simplify locator maintenance and reduce flaky tests.
- Designed smoke, sanity, and regression suites to support sprint cycles and faster validation during releases.
- Integrated automation into GitLab CI/CD for nightly runs, real-time reporting, and early defect detection, reducing production issues by **25%.**
- Delivered weekly dashboards summarizing UI regression results, flaky tests, and defect trends to support sprint planning and release decisions.

Financial Application API Automation

Responsibility:

- Automated **30+ API test cases** covering positive, negative, and boundary scenarios, improving backend validation efficiency by 40%.
- Executed **daily/weekly automated API** runs via Newman integrated in CI pipelines, ensuring **100% coverage** of critical service endpoints.
- Performed exploratory API testing using Postman on **15+ endpoints**, reducing unexpected production issues by **20%.**
- Contributed API results to QA dashboards, helping the team track response accuracy and service reliability trends.

Education

Rajiv Gandhi University of knowledge Technologies(Nuzvid) **2022**
B.Tech CGPA: 7.89
