KASTUR DILIP CHAUDHARI

QA Automation Engineer | Selenium Java | Playwright TypeScript | API Testing | SQL Validation
Pune, Maharashtra, India | +91-8799864361 | kastur.chaudhari1818@gmail.com

PROFESSIONAL SUMMARY

QA Automation Engineer with 4+ years of experience in software testing, test automation, API testing, functional testing, regression testing and database validation for web applications in investment banking and healthcare domains. Strong hands-on experience in Selenium WebDriver with Java/TestNG and Playwright with TypeScript, including Page Object Model, Hybrid Framework, Data-Driven Framework, REST Assured, Postman, SoapUI, SQL, Jenkins, GitHub Actions, Git, Jira, HP ALM and Agile/Scrum. Experienced in reusable automation framework development, CI/CD test execution, defect triage, release testing and end-to-end quality validation.

CORE SKILLS

Automation Testing: Selenium WebDriver, Playwright, TestNG, Cucumber BDD, Page Object Model (POM), Hybrid Framework, Data-Driven Framework, Cross-Browser Testing

Programming and Scripting: Java, TypeScript, JavaScript, SQL, OOP Concepts, Test Automation Scripting

API and Database Testing: REST Assured, Postman, SoapUI, REST APIs, JSON Validation, HTTP Methods, Status Codes, SQL Queries, Test Data Validation

Testing Types: Functional Testing, Regression Testing, Smoke Testing, Sanity Testing, Retesting, End-to-End Testing, UI Testing, Compatibility Testing, Usability Testing

CI/CD and Tools: Jenkins, GitHub Actions, CI/CD, Git, GitHub, Maven, VS Code, Eclipse, IntelliJ IDEA

Test Management and Process: Jira, HP ALM, Agile, Scrum, SDLC, STLC, Test Case Design, Test Execution, Defect Tracking, Defect Lifecycle, Test Reporting, Release Testing

PROFESSIONAL EXPERIENCE

QA Automation Engineer | Starlink Technology OPC Pvt. Ltd. | Pune, India | June 2022 - Present

- Designed, developed and maintained UI automation scripts using Selenium WebDriver with Java/TestNG and Playwright with TypeScript for web-based applications.
- Created reusable Page Object Model components, common utilities, custom wait methods, assertion helpers and test data handling logic to improve automation stability and maintainability.
- Prepared test scenarios, test cases, regression suites, smoke suites and test execution reports from business requirements, user stories and functional specifications.
- Performed functional, smoke, sanity, regression, retesting, UI, compatibility, cross-browser and end-to-end testing across sprint, UAT and release cycles.
- Validated APIs using Postman, REST Assured and SoapUI by checking request payloads, response codes, headers, JSON fields, error messages and business validations.
- Used SQL queries for backend data verification, test data setup, data integrity checks and validation of UI/API results against database records.
- Integrated automation suites with Jenkins and GitHub Actions for scheduled regression execution, continuous testing and faster release validation.
- Tracked, reproduced, retested and closed defects using Jira and HP ALM while collaborating with developers, QA engineers, product owners and business stakeholders in Agile/Scrum ceremonies.
- Participated in daily stand-ups, sprint planning, backlog refinement, test review meetings and release sign-off activities with clear QA status reporting.

PROJECT EXPERIENCE

Loan Origination System | Banking Domain

Technologies: Selenium WebDriver, Java, TestNG, Maven, Page Object Model, SQL, Jira, Jenkins
Project Description: Web-based banking application used to support end-to-end loan origination activities such as customer onboarding, application creation, document verification, eligibility checks, approval workflow and loan status tracking.

- Analyzed business requirements, user stories and acceptance criteria to identify test scenarios for loan application, customer details, document upload, verification and approval flows.
- Automated critical workflows using Selenium WebDriver, Java and TestNG, including login, customer search, loan application initiation, form validation, workflow navigation and status verification.
- Developed reusable page classes, locator strategies, base test methods and utility functions for forms, dropdowns, tables, date fields, alerts and validation messages.
- Executed manual and automated regression suites to validate business rules, field-level validations, data accuracy, integration points and negative test scenarios.
- Performed SQL-based backend validation to verify loan application records, status updates, customer data and transaction-related values after UI operations.
- Logged defects in Jira with clear reproduction steps, screenshots, expected/actual results and severity details; supported developers during defect analysis and retesting.
- Contributed to regression suite optimization and release validation, helping reduce repetitive manual testing effort for high-priority banking workflows.

Claim Management System | Healthcare Domain

Technologies: Playwright, TypeScript, Selenium WebDriver, Jenkins, Git, GitHub, Jira
Project Description: Healthcare claim management web application used to manage claim registration, claim verification, approval workflows, status tracking, document validation, UI validations and cross-browser behavior for healthcare users.

- Designed and executed Playwright with TypeScript automation scenarios for healthcare claim workflows, including login, dashboard navigation, claim registration, claim status, approval screens and UI validation flows.

- Created reusable Playwright test structure with locators, common actions, assertions and test data support to make scripts easier to maintain across sprint changes.
- Performed functional, UI, smoke, regression and cross-browser testing to validate workflow stability, form validations, mandatory fields, error messages and data display behavior.
- Integrated Playwright regression execution with Jenkins/Git-based CI/CD pipeline and reviewed execution logs, failed screenshots and reports to support faster defect resolution.
- Collaborated with developers and business users to reproduce claim workflow issues, clarify expected behavior and complete retesting before release sign-off.
- Maintained automation scripts after UI changes by improving selectors, synchronization, waits and reusable helper methods to reduce flaky test failures.
- Prepared daily QA status, defect status and test execution summary for sprint and release-level tracking.

KEY ACHIEVEMENTS

- Reduced regression testing cycle time by 40% by automating 200+ test cases using Selenium WebDriver, Java, TestNG and POM framework.
- Achieved 95%+ test coverage for end-to-end banking workflows and identified 50+ critical defects with zero production escapes in 3 consecutive releases.
- Reduced manual testing effort by approximately 50% with Playwright + TypeScript automation suite and cut release validation time from 2 days to under 4 hours through Jenkins CI/CD integration.
- Improved automation maintainability by creating reusable page objects, shared utilities and stable test execution practices across sprint and release cycles.

CERTIFICATIONS

ISTQB Certified Tester

EDUCATION

Bachelor of Science (B.Sc.) - BAMU University (2021)
