Summary

Results-driven **QA Automation Engineer** with 3.6 years of experience delivering scalable, high-performance healthcare, financial, and E-commerce applications. Expertise in **Java, JavaScript, SQL, HTML5, CSS3, REST APIs, Selenium WebDriver, Appium, Playwright, TestNG, Cucumber BDD, Gherkin, Postman, API Validation, and Web Application Testing**. Strong foundation in distributed systems, **CI/CD** practices, **Requirements Analysis, Debugging, Root Cause Analysis, and Agile/Scrum Collaboration**, seeking challenging software QA roles in innovative, product-driven organizations.

Experience

Associate Software Engineer **Feb 2023 – July 2026**
Skillerio Private Limited, Pune, India *Java, Selenium, Cucumber, Jenkins, REST API*

- **Designed and maintained a scalable Hybrid Automation Framework** using **Java, Selenium WebDriver,** and **Page Object Model (POM)**, improving code reusability by **35%**.
- Enhanced reusable automation components using **Java** and **Object-Oriented Design** principles, contributing to a **35% improvement in code reusability** across the automation framework.
- **Implemented Behavior-Driven Development (BDD)** using **Cucumber** and **Gherkin** feature files, improving cross-functional requirement alignment and contributing to a **20% reduction in sprint bug leakage**.
- Established data-driven test scripts for validating **REST APIs** through comprehensive request/response schema, payload, and backend validation.
- **Integrated regression test suites with Jenkins CI/CD pipelines**, reducing build validation time from hours to minutes through continuous testing practices.
- Used **Git** and **GitHub** for source code management, version control, and collaboration within the engineering team.
- Collaborated with Developers, Product Owners, and Business Stakeholders during **Agile/Scrum** ceremonies to analyze requirements and define acceptance criteria, contributing to improved requirement alignment and a **20% reduction in sprint bug leakage**.
- Executed debugging and in-depth root cause analysis for application **defects**, documenting technical findings in **Jira** to accelerate issue resolution and support the **20% reduction in sprint bug leakage**.
- Analyzed complex system requirements and generated **validation solutions** for critical application workflows, increasing test coverage by **40%**.
- Utilized **GenAI** tools, including **ChatGPT** and **Gemini**, to optimize automation scripts, accelerate exploratory analysis, and improve engineering productivity.

Projects

LightInTheBox – E-commerce Domain

- **Built a regression test suite using Java and Selenium WebDriver**, reducing manual testing effort by **30%**.
- Managed and audited client-side technical requirements using the **IBM Rational DOORS** configuration environment.
- Validated platform UI compatibility across **Chrome, Firefox, and Safari** browsers to ensure consistent application behavior.
- Executed end-to-end regression testing for critical application workflows using **Java and Selenium WebDriver**.
- Initiated simulation-based automation scripts to replicate real-world user workflows, increasing test coverage by **40%**.
- Enhanced reusable automation components following **Page Object Model** principles to improve maintainability and scalability.
- Monitored defect lifecycles using **Jira and ClearQuest** and conducted root cause analysis for identified application issues.
- Utilized **GenAI tools, including ChatGPT,** to optimize script execution, accelerate exploratory testing, and reduce test script development time.

Healthcare Scholarship Fund (HSF) – Healthcare Domain

- Analyzed complex user stories and application blueprints to execute environment setups and baseline manual test cases.

- Implemented Selenium-based workflows for high-frequency application scenarios to identify regressions early in deployment cycles.
- Configured **Jenkins** pipeline execution triggers to support automated testing across staging environments.

Skills

Programming Languages: Java, JavaScript, SQL
Mobile Application Testing: Manual Testing, Appium, iOS and Android Testing
Web Technologies: HTML5, CSS3
Software Engineering: Object-Oriented Programming, Page Object Model (POM), Hybrid Frameworks, Data-Driven Testing
Automation & Testing: Selenium WebDriver, TestNG, Cucumber BDD, Gherkin, Functional Testing, Regression Testing, Manual Testing, Mobile Application Testing
API & Tools: REST API Validation, Postman, Request/Response Validation, Payload Verification
DevOps & Version Control: Jenkins, Git, GitHub, CI/CD
Engineering Practices: SDLC, STLC, Agile/Scrum, Requirements Analysis, Debugging, Root Cause Analysis, Defect Triage
Other Tools: Jira, IBM Rational DOORS, ClearQuest, ChatGPT, Gemini, GenAI

Awards & Certifications

- **Selenium Automation Testing with Java:** Completed certification focused on Selenium WebDriver automation using Java.
- **Cucumber BDD with Java:** Completed certification focused on Behavior-Driven Development using Cucumber and Java.
- **Introduction to CI/CD:** Completed training covering continuous integration and continuous delivery practices.
- **Complete Software Testing Bootcamp:** Completed comprehensive software testing training covering software testing fundamentals and practices.
- **ChatGPT for Work & AI for Everyone:** Completed training focused on practical AI and ChatGPT usage.
- **C Programming – Seed Info-Tech, Jalgaon:** Completed C programming certification.

Education

Master of Computer Applications (MCA) **Graduated: 2022**
RCPET's Institute of Management Research and Development *87.38%*

B.Sc. in Computer Science **Graduated: 2020**
KCE Society's Moolji Jaitha College *65.97%*

Higher Secondary Certificate (HSC) **Graduated: 2017**
MSBS-HSE *60.31%*
