To leverage **nearly 4 years** of experience in Quality Assurance, Test Automation, API Testing and Quality Engineering to contribute as a Senior QA Engineer with a growth-oriented organization, driving effective test strategies, automation adoption, release quality and team capability while collaborating closely with development, product, and business stakeholders to deliver reliable and high-quality software solutions.

Profile Summary

- **Experienced in Delivery & Ownership, coordinating testing activities,** mentoring QA team members, managing priorities, and ensuring quality outcomes across multiple projects.
- **Strong expertise in test planning, test case design, execution, defect management**, regression testing, integration testing, and exploratory testing across complex application workflow.
- **Proficient in test automation using Robot Framework, Selenium, and Python,** with experience developing scalable regression suites and improving automation reliability.
- **Experienced in testing AI/LLM-powered applications, including LLM-generated content**, prompt workflow, candidate scoring, recommendation engines, API responses, and edge-case scenarios.
- **Skilled in API, UI, database, and end-to-end testing across micro-services**, legacy, middleware, web, mobile, and back-end environments.
- **Strong exposure to CI/CD-driven quality engineering**, integrating automated regression testing with Azure DevOps to improve release efficiency and testing coverage.
- **Experienced in requirements validation, UAT support, production issue analysis**, root cause investigation, and defect lifecycle management, ensuring alignment between business requirements and product quality.
- **Displayed capability to work effectively with developers, product teams, clients,** and QA professionals, combining analytical thinking, technical understanding, mentoring skills, and a quality-focused approach to support reliable software releases.

Core Competencies

QA Strategy, Test Planning & Risk Assessment	**Test Management & Quality Engineering**	**Functional, Regression & Integration Testing**
API, Back-end & End-to-End Testing	**Test Automation & Framework Development**	**Defect Management & Root Cause Analysis**
Release Validation, UAT & CI/CD	**Requirements, Risk & Quality Assessment**	**Quality Improvement & QA Mentoring**
Selenium, Robot Framework & Python Automation	**Java, TestNG, POM & Automation Testing**	**Azure DevOps, Git & Agile/Scrum**
Database Testing & Data Validation	**AI/LLM Application & Prompt Workflow Testing**	

Technical Skills

- **Programming Languages:** Java, Python
- **Automation Frameworks:** Selenium WebDriver, Robot Framework, TestNG, Page Object Model (POM), Maven
- **API Testing:** Postman, REST Assured, Swagger, REST APIs, JSON, XML, HTTP Methods, Status Codes, Headers, Parameters, Request/Response Validation
- **Database Testing:** SQL, PostgreSQL, MongoDB, Oracle
- **DevOps & CI/CD:** Azure DevOps, Git, CI/CD Pipelines, Linux
- **Testing Types:** Functional, Regression, Smoke, Sanity, Integration, System, UAT, End-to-End, Exploratory, API, Database
- **Methodologies:** Agile/Scrum, SDLC, STLC, BDD

Work Experience

Skilljourney LLP, Pune | Since Jun'24

Growth Path
QA Engineer | Jun'24 – May'25
Senior QA Engineer | Jun'25 – Present

HyrAI – AI Interview Platform
Domain: AI / HR Tech | Oct'25 – Present

- Directing end-to-end quality assurance for an AI-powered interview platform leveraging LLMs and Gemini APIs, ensuring functional reliability and consistency across AI-driven recruitment workflow.
- Assessing LLM-generated interview questions, candidate scoring algorithms, prompt workflow, Gemini API responses and recommendation engine outputs across diverse edge-case and exception scenarios.
- Executed 200+ test scenarios spanning API, database, functional, regression, and exploratory testing across end-to-end AI recruitment workflow.
- Developed and implemented UI & API automation using Robot Framework, expanding automated test coverage across end-to-end application workflows.
- Investigating production issues through structured root cause analysis, validated fixes, and supported defect resolution to improve platform stability and release quality.

Future Bridge – College Recommendation System
Domain: EdTech / Data-Driven Recommendation | Jan'25 – Present

- Performing testing of rule-based college recommendation algorithms using CET, NEET, and JEE percentile data against historical & applicable cutoff trends.
- Verifying data extraction pipelines, prediction logic, recommendation accuracy, and system behaviour across boundary, negative, and edge-case scenarios.
- Formulating and executing test cases for admission probability workflow, covering functional, boundary, negative, and exception conditions.
- Automating regression testing using Robot Framework and supported client UAT sign-off, requirement validation, and business acceptance activities.

Career Journey – Education Platform
Domain: EdTech | Jun'24 – Oct'25

- Designed and maintained a Robot Framework automation suite using Selenium and Python, covering 100+ regression scenarios and improved automation stability from 70% to 90%.
- Validated end-to-end application functionality across UI, API, and database layers within a micro-services-based architecture.
- Created and executed 150+ manual and automated test cases spanning functional, integration, regression, and end-to-end testing.
- Accelerated release cycles by 30% through automation-led regression testing and integration with Azure DevOps CI/CD pipelines.
- Collaborated across Development and QA Teams to identify defects, validate fixes, and strengthen overall release readiness.
- Mentoring QA team members on test execution, defect analysis, quality practices, and effective validation approaches.

Oye Creators – Brand-Creator Collaboration Platform
Client Project | Domain: Creator Economy | Jun'24 – Jul'26

- Coordinated quality assurance across web, mobile, and back-end APIs for a brand-creator collaboration platform.
- Developed comprehensive test cases covering creator onboarding, campaign management, brand-creator collaboration and core platform workflow.
- Performed cross-browser, cross-platform, regression, and API testing to validate application compatibility and functional consistency.
- Verified third-party integrations and internal microservices using Postman, ensuring reliable API communication and data exchange

Test Specialist | IBM India Pvt. Ltd., Pune | Feb'22 – Jun'23
Client: AT&T |Domain: Telecommunications
Project: CADM – Customer Account Data Management
Responsibilities:

- Executed manual & API testing for telecom billing and Customer Account Data Management systems, validating business functionality & data flows.
- Prepared and executed 150+ System Integration Testing (SIT) test cases based on Software Requirements Specification (SRS) requirements.
- Assessed functional, regression, and non-functional requirements across middleware and legacy systems while ensuring integration and business-process reliability.
- Administered the defect lifecycle using JIRA and I-Track, from defect identification and documentation through validation and closure.
- Analyzed application and system logs using Linux-based tools and performed back-end validation to support defect investigation and root cause identification.

Finance Service Consultant | ICICI Prudential Life Insurance, Amravati | Nov'18 – Jan'22
Responsibilities:

- Managed client relationships through financial consultations, requirement understanding, documentation, and policy-related service support.
- Coordinated policy processing and documentation while ensuring adherence to applicable compliance and process requirements.
- Strengthened analytical, communication, stakeholder management, and problem-solving capabilities through direct client interaction and financial service operations.

Achievements

- Earned promotion from QA Engineer to Senior QA Engineer within 12 months in recognition of delivery excellence, ownership, and quality contributions.
- Enhanced automation suite stability from 70% to 90% by developing and maintaining Robot Framework automation for 100+ regression scenarios.
- Reduced release validation effort by 30% through automation-driven regression testing and CI/CD integration with Azure DevOps Pipelines.
- Designed and executed 300+ test cases spanning UI, API, Database, and End-to-End workflow, supporting high-quality releases with minimal production defects.

Education

- **2018: B.E. (Electronics & Telecommunication),** Sant Gadge Baba Amravati University

Certifications

- Java Developer Associate Certification (JDAC-24) – Core Java, OOP, Collections & Exception Handling
- Selenium WebDriver Automation Workshop – Framework Design, POM & TestNG Integration

Personal Details

- **Date of Birth:** 30th August 1996
- **Languages:** English, Hindi & Marathi
- **Address:** Amravati, 444710
