PROFESSIONAL SUMMARY
Results-driven QA / Test Engineer with nearly 4 years of experience in manual and automation testing across Banking and Manufacturing domains. Skilled in creating and executing detailed test cases, performing regression and integration testing, and ensuring software reliability and compliance with business requirements. Adept in Agile environments, collaborating with cross-functional teams, and delivering high-quality, defect-free releases.

CORE COMPETENCIES
- Manual Testing (Functional, Integration, Regression)
- Automation Testing (Selenium WebDriver, TestNG, Java)
- API Testing (Postman, Swagger)
- Test Case Design, Execution & Review
- Defect Tracking & Reporting (Jira)
- Performance & Security Testing (Manual)
- Agile & Scrum Methodologies
- Test Documentation & Reporting
- Cross-functional Team Collaboration

PROFESSIONAL EXPERIENCE
Test Engineer — Tata Consultancy Services (TCS), Pune
March 2022 – Present
- Lead manual and automation testing efforts across multiple projects ensuring complete functional and non-functional coverage.
- Develop, execute, and maintain comprehensive test cases and traceability matrices based on business and technical requirements.
- Build and maintain automation test scripts using Selenium WebDriver and TestNG for regression and smoke testing.
- Perform integration, regression, and system testing to ensure product stability across releases.
- Conduct manual performance and security testing to validate data integrity and compliance.
- Collaborate with Agile teams to refine user stories, improve test scope, and ensure sprint deliverables meet quality standards.
- Identify, log, and track defects using Jira, ensuring timely resolution and retesting.

PROJECTS
1. RICOH - MES Implementation
Client: Ricoh | Domain: Manufacturing | Role: QA Engineer
- Performed manual testing of key Manufacturing Execution System (MES) modules including Production Scheduling, Inventory Management, and Quality Control.
- Utilized Apriso and Apriso Process Builder to validate MES workflows and ensure seamless integration.
- Developed and executed test cases ensuring smooth end-to-end functional workflows.
- Performed regression and functional testing post-deployments to validate stability.
- Collaborated with cross-functional teams for requirement clarifications and defect resolution.
- Delivered detailed documentation and reports supporting user acceptance and go-live readiness.

2. DBAG - Security Clearing Services
Client: Deutsche Börse Group | Domain: Banking / Trading | Role: QA Engineer
- Performed end-to-end automation and manual testing of modules such as Order Entry, Aggregation, and Trade Settlement.
- Designed and executed test cases to validate workflows, data accuracy, and regulatory compliance.

- Developed automation scripts for regression testing using Selenium WebDriver and TestNG.
- Conducted integration and regression testing during iterative releases.
- Worked closely with development and business teams to ensure quality delivery and quick defect turnaround.
- Prepared detailed test reports and execution summaries for stakeholder reviews.

TOOLS & TECHNOLOGIES
Testing Tools: Postman, Swagger, JMeter, Selenium WebDriver, TestNG, Apriso, Apriso Process Builder
Languages: Java
Databases: MySQL, PostgreSQL
Defect Tracking & Version Control: Jira, GitHub
Operating Systems: Windows

EDUCATION
Bachelor of Technology (B.Tech) - Mechanical Engineering
Dr. Babasaheb Ambedkar Technological University, Lonere | Graduated: 2021

ADDITIONAL INFORMATION
- Strong analytical and problem-solving skills
- Excellent communication and collaboration across distributed teams
- Quick learner with a focus on continuous improvement and process efficiency
