Professional Summary:

QA Engineer with 3+ years of experience in Manual and Automation Testing across Banking and Workforce Management domains. Strong hands-on expertise in Functional, Regression, Smoke, and Integration Testing. Proficient in Selenium Web-Driver with Java, Test-NG, Postman, JIRA, Test-Rail, SQL. Experienced in designing test scenarios, automating regression suites, performing API testing, and ensuring end-to-end data validation. Proven ability to work in Agile teams and deliver high-quality releases with complete requirement traceability.

Technical Skills:

- **Testing Types:** Manual Testing, Automation Testing, API Testing, Database Testing
- **Automation Tools:** Selenium WebDriver, TestNG
- **Automation Framework:** Page Object Model (POM)
- **Programming Language:** Java
- **API Testing Tools:** Postman
- **Build & Version Control:** Maven, Git
- **Test Management Tools:** TestRail
- **Defect Tracking Tool:** JIRA
- **Databases:** MySQL
- **Methodologies:** SDLC, STLC, Agile/Scrum
- **Testing Activities:** Functional Testing, Regression Testing, Smoke Testing, Integration Testing, Defect Life Cycle

Experience:

SKY IT Solutions – *Software Test Engineer* (Sept 2023 – Present)

Project 1

Project Name: Employee Time Tracking & Productivity Monitoring System
Domain: Workforce Management
Tools/Utilities: Test-rail, JIRA, Postman
Project description:

The project is an Employee Activity Tracking and Productivity Monitoring system consisting of a desktop application for employees and a web-based portal for managers, admins, and super admins. The desktop application captures employee working hours, idle time, screenshots, and application or website usage, with all data securely synchronized to the backend server. The web portal provides dashboards, productivity and attendance reports, business unit and project management, and suspicious activity monitoring, allowing management to analyse employee performance and work patterns. The system ensures accurate end-to-end data flow from user activity tracking on the desktop application to analytical reporting on the web portal, supporting effective workforce monitoring and decision-making.

Roles & Responsibilities

- Designed and executed **5000+ detailed test cases** for Web and Desktop applications, ensuring **90%** requirement coverage.
- Performed **functional, regression, smoke,** and **UI testing** across Desktop (employee-side) and Web Portal (admin/manager-side) applications.
- Validated employee activity tracking features including working hours, idle time calculation, screenshot capturing, and application/website usage tracking.
- Ensured accurate data synchronization between Desktop application and backend server reflected on Web dashboards.
- Tested **admin features** such as dashboards, attendance, productivity analytics, activity summary, business units, projects, schedules, and suspicious activity reports.
- Logged, tracked, and retested defects using JIRA and collaborated closely with developers to ensure timely resolution and release stability.

Project 2

Project Name: Core Banking & Bill Payment
Domain: Banking
Tools/Utilities: Test rail, JIRA, Java, Selenium, Test-NG, Maven, Postman
Project description:

It leverages core banking solutions to meet the growing financial needs of individual consumers while ensuring security, accessibility, and efficiency. The design and development of a Core Banking & Bill Payment solution to improve transaction management, automate bill payments, and enhance user experience. Integrated secure payment gateways, real-time transaction processing, and automated billing features. Their commitment to secure banking services empowers customers to manage their money and access financial products seamlessly.

Roles & Responsibilities

- Analyzed user stories and acceptance criteria from JIRA and Confluence to prepare detailed test cases with full traceability.
- Automated regression test cases using **Selenium WebDriver** with Java and **TestNG** following **Page Object Model (POM)** design pattern.
- Executed automated test suites using **TestNG** and **Maven** during regression cycles.
- Performed API testing using Postman for **banking** and **bill payment services**, validating request/response, status codes, and data accuracy.
- Participated in sprint planning, daily stand-ups, regression execution, and defect triage meetings in Agile environment.
- Ensured functional stability of core banking features such as login, recharge module, transaction history, Manage payee and validations.

Education:

Bachelor of Engineering– Computer Science & Engineering
MGI College of Engineering, Shegaon
2018 – 2022 | Percentage: 72.34%

Achievement:

Received **SPOT AWARD** for identifying a critical security bug before release, preventing potential production impact.
