SWAPNIL ASHOK MAKHARE

QA Automation Engineer | Selenium WebDriver (Java)

Pune, Maharashtra | +91 7972497968 | swapnilmakhare1006@gmail.com

PROFESSIONAL SUMMARY

QA Automation Engineer with **4 years of dedicated hands-on experience** specializing in Java and Selenium WebDriver framework development across Automobile, Telecom, and Healthcare domains. Expert in building robust Page Object Model (POM) frameworks, writing complex Java-based Selenium automation scripts, executing API testing, performing advanced SQL database validations, and managing CI/CD pipelines to accelerate release cycles.

TECHNICAL SKILLS

Automation:	Java, Selenium WebDriver, TestNG, Page Object Model (POM), Data-Driven Framework, Playwright (Knowledge)
API & Database:	Postman, REST Assured, SQL, MySQL
DevOps & Tools:	Azure DevOps, Git, GitHub, JIRA, CI/CD Pipelines
Testing Types:	Functional, Regression, Smoke, Sanity, Integration, Cross-Browser, UI, Agile Scrum, STLC, SDLC

PROFESSIONAL EXPERIENCE

Capgemini | Pune, India — **Senior Analyst - QA Automation Engineer** **Aug 2022 – Present**

- Architected, developed, and maintained a comprehensive Data-Driven Page Object Model (POM) framework using **Java and Selenium WebDriver** from scratch, significantly reducing regression cycle times and manual testing efforts.
- Automated **250+ business-critical regression scenarios** using Selenium WebDriver and TestNG across functional, smoke, sanity, and integration test suites.
- Wrote and executed complex Selenium automation scripts handling dynamic web elements, implicit/explicit waits, pop-ups, frames, and cross-browser testing (Chrome, Firefox, Edge).
- Integrated Selenium Java test suites into Azure DevOps CI/CD pipelines to trigger automated script execution on every build and deployment.
- Designed and executed API test suites using Postman and REST Assured to validate backend services and verify payload responses prior to UI testing.
- Performed robust database-level validations using **SQL and MySQL** queries to ensure complete data accuracy and integrity across application workflows.
- Managed end-to-end defect lifecycles in Azure DevOps—logging, triaging, tracking, and re-testing execution failures to maintain high software quality.
- Collaborated closely with developers, business analysts, and product owners in Agile Scrum ceremonies (sprint planning, daily standups, retrospectives).

DETAILED PROJECTS (JAVA & SELENIUM FOCUSED)

- **Automobile Domain:** Developed end-to-end test automation scripts using **Java and Selenium WebDriver** for vehicle management workflows. Handled dynamic web elements, integrated Apache POI for data-driven testing using Excel sheets, and executed backend database checks via SQL queries alongside CI/CD pipeline executions.
- **Healthcare Domain:** Built robust automation frameworks with **Java and Selenium** for patient management portals. Handled complex UI components including frames, alerts, and calendar pickers, and verified backend patient data integrity through precise SQL validation.
- **Telecom Domain:** Created scalable regression test suites using **Selenium (Java) and TestNG** for subscriber onboarding and billing workflows. Integrated REST Assured for backend service verification and managed task tracking and bug reporting in JIRA.

EDUCATION & CERTIFICATIONS

Degree: Bachelor of Mechanical Engineering | Savitribai Phule Pune University (2017–2021)

Certifications: Automation Testing with Selenium, API Testing using Postman, REST Assured Automation, SQL - Intermediate & Advanced, Agile Software Development
