PROFESSIONAL SUMMARY

Automation Test Engineer with 2+ years of experience at Cognizant specializing in Selenium-based test automation, API testing, and CI/CD integration. Strong expertise in designing scalable automation frameworks using Java, TestNG, and Cucumber (BDD). Proven track record of reducing regression cycle time, increasing test coverage, and improving defect detection efficiency. Experienced in Agile (Scrum) environments, collaborating with cross-functional teams, and ensuring high-quality software delivery. Skilled in UI and API automation, continuous testing, and integrating automated suites into Jenkins pipelines for faster release cycles.

SKILLS

Programming Languages: Java, SQL, Object-Oriented Programming
Automation Tools: Selenium WebDriver, TestNG, Cucumber (BDD), JUnit
Frameworks: Page Object Model (POM), Data-Driven, Hybrid Framework
Testing Types: Functional, Regression, Smoke, Integration, UI, API Testing
CI/CD & Tools: Git, Maven, JUnit, Jenkins
Defect Tracking: JIRA
Methodologies: Agile (Scrum), SDLC, STLC

PROFESSIONAL EXPERIENCE

Programmer Analyst · Cognizant Technology Solutions · *Pune, India* *Dec 2024 – Present*

- Designed and implemented Selenium WebDriver-based automation frameworks (POM + TestNG/Cucumber), improving test execution efficiency by 40% and reducing manual effort.
- Automated 150+ test cases across UI and API layers, increasing regression test coverage to 85% and accelerating release cycles.
- Automated critical regression test scenarios, helping reduce manual testing effort and ensuring faster validation during release cycles.
- Analyzed business requirements and prepared detailed test cases, test scenarios, and test data for functional and UI validation.
- Performed manual functional, exploratory, and usability testing to identify UI/UX issues and edge case defects.
- Conducted end-to-end testing of application workflows to ensure alignment with business requirements.
- Executed functional, regression, smoke, and integration testing as part of Agile sprint cycles, ensuring application stability after each build.
- Collaborated with developers, product owners, and QA team members to understand business requirements and translate them into effective test scenarios and automation scripts.
- Logged, tracked, and retested defects using JIRA, ensuring proper documentation and timely resolution in coordination with development teams.
- Contributed to improving test processes and identifying areas for automation within existing manual test cases.
- Maintained and updated test scripts in response to application changes, improving overall test suite stability.
- Wrote and executed SQL queries for backend data validation to ensure data integrity and consistency across systems.
- Recognized for contributions to test automation, improving test efficiency, and supporting stable releases through effective collaboration.

Programmer Analyst Trainee · Cognizant Technology Solutions · *Chennai, India Sep 2023 – Nov 2024*

- Contributed to test automation and manual testing efforts for enterprise applications, focusing on UI and API validation.
- Collaborated with cross-functional teams on defect analysis, test execution, and improving overall application quality.
- Participated in test case design, test execution, and documentation, ensuring adherence to QA standards and best practices.
- Gained hands-on experience with Selenium WebDriver, TestNG, and Cucumber (BDD) for automation testing, as well as performing manual functional and exploratory testing to ensure comprehensive quality coverage.
- Developed expertise in troubleshooting production issues through manual defect analysis and automation script debugging, resolving null pointer exceptions and database connectivity problems.

TECHNICAL PROJECTS

Automation Testing Framework for E-Commerce Platform | QA Automation Project

- Designed and developed a hybrid automation framework (Page Object Model + Data-Driven) using Selenium WebDriver with Java, improving test reusability and maintainability
- Automated end-to-end test scenarios covering login, product search, cart, checkout, and payment workflows
- Integrated TestNG for test execution, grouping, and parallel testing, reducing execution time by 40%
- Implemented API automation testing using Rest Assured, validating request/response, status codes, and JSON schema for multiple endpoints
- Built robust utility functions for handling waits, screenshots, logging, and reusable components
- Developed cross-browser testing capabilities using Chrome and Edge via WebDriverManager
- Integrated Extent Reports for detailed HTML reporting with screenshots and logs for failed test cases
- Performed database validation using SQL queries to ensure backend data consistency
- Configured CI/CD pipeline using Jenkins, enabling automated test execution on every build
- Managed test execution through Git version control, maintaining proper branching and code reviews
- Implemented exception handling and retry mechanisms to handle flaky tests and improve stability
- Achieved 85–90% automation coverage for critical regression test cases.

Tech Stack: Java, Selenium WebDriver, TestNG, Rest Assured, Maven, Jenkins, Git, SQL, Extent Reports

EDUCATION

B.Tech — Electronics & Telecommunication Engineering *Jul 2019 – May 2023*
Bhilai Institute of Technology, Bhilai, C.G. · CPI- 8.6 Percentage- 82.1%

CERTIFICATION

- Selenium Professional Certification.
- API Testing using Postman & Rest Assured.
- GitHub Copilot for Automation Engineers – QEA.
- Generative AI for QEA.
