PROFESSIONAL SUMMARY

Automation-driven Software Test Engineer with 3+ years of experience delivering enterprise applications across Insurance and Healthcare domains. Expertise in Playwright, Selenium (Java), TestNG, Cucumber (BDD), and REST Assured for API automation. Experienced in framework design (POM, Hybrid, Data-Driven), Oracle SQL validation, cross-browser testing, and CI/CD integration using Jenkins. Strong contributor in Agile environments. Good understanding of SDLC processes

TECHNICAL SKILLS

- Automation: Playwright, Selenium WebDriver (Java), TestNG, Cucumber (BDD).
- API Testing: REST Assured, Postman, JSON & Schema Validation
- Database: Oracle SQL (Joins, Subqueries, Data Validation)
- Frameworks: POM, Data-Driven, Hybrid Frameworks, Parallel Execution
- Tools: Maven, Git, Jenkins, JIRA, BrowserStack, VS Code
- Methodology: Agile/Scrum, SDLC, STLC

PROFESSIONAL EXPERIENCE

Software Test Engineer | QuicSolv Technologies Pvt. Ltd., Pune |

Project: TransRe Insurance Platform (Life & General Insurance)

- Increased automation coverage to 65% by developing Selenium + TestNG framework.
- Reduced regression cycle time by 40% through automation optimization.
- Implemented BDD framework using Cucumber for business-readable automation.
- Automated REST APIs (policy issuance, claims processing) using REST Assured.
- Validated underwriting and premium calculation logic with Oracle database queries.
- Integrated automation suite with Jenkins for CI execution.
- Performed cross-browser testing using BrowserStack.
- Identified high-severity defects pre-production, improving release stability.

Project: Healthcare Management System (Healthcare Domain)

- Executed functional, regression, system, and UAT testing.
- Automated high-risk regression scenarios using Selenium + TestNG.
- Developed BDD feature files aligning with business requirements.
- Automated eligibility and claims APIs using REST Assured.
- Performed backend validation using Oracle SQL queries.
- Improved early defect detection during sprint cycles.

AUTOMATION FRAMEWORK HIGHLIGHTS

- Designed Hybrid Framework integrating POM, Data-Driven & BDD approaches.
- Configured TestNG for parallel execution and suite management.
- Managed build lifecycle using Maven and version control using Git.
- Integrated nightly execution pipeline via Jenkins.

KEY ACHIEVEMENTS

- Reduced regression effort by 40% through automation initiatives.
- Improved automation stability and reusability across modules.
- Strengthened API and backend validation processes.
