TIASA DESHMUKH

QA Automation Engineer

Pune, Maharashtra, India | +91-9007049807 | tiasadeshmukh2@gmail.com | linkedin.com/in/tiasadeshmukh | github.com/tiasa20

SUMMARY

QA Automation Engineer with 3 years of experience validating enterprise telecom applications in Agile environments. Automated 30+ critical regression scenarios for Deutsche Telekom AG at Cognizant, cutting repeat manual execution by 40% and enabling consistent on-time sprint releases across 3 years of production deployments. Hands-on in Selenium WebDriver, Java, TestNG, REST API testing, and SQL validation, with 200+ manually executed test cases, 25+ defects logged across the full STLC, and a POM-based framework built from scratch with CI/CD execution via Jenkins. Uses AI-assisted tools such as GitHub Copilot and ChatGPT/Claude to accelerate script authoring, test case design, and documentation.

SKILLS

Languages: **Java**, **SQL**

Test Automation: **Selenium WebDriver** , **TestNG** (parallel execution), **Cucumber** (BDD), **JUnit**, **Page Object Model** (POM), **Data-Driven & Hybrid Frameworks**

AI-Assisted Tools: **GitHub Copilot** (test script generation & code completion in Java/Selenium), **ChatGPT/Claude** (test case design, edge-case brainstorming, documentation & defect write-ups)

API Testing: **Postman**, **REST API — request/response validation** , **contract testing** , **auth flows**

Database: **SQL — data integrity checks** , **provisioning state verification** , **business rule validation**

CI/CD & Build: **Jenkins** , **Maven**

Version Control: **Git**, **GitHub**

Test Management: **JIRA — defect lifecycle** , **test case design**, **execution tracking** , **sprint reporting**

Testing Types: **Functional**, **Regression** , **Smoke**, **Integration** , **E2E**, **API** , **Database**, **Exploratory**

Methodologies: **Agile Scrum** , **SDLC**, **STLC**

EXPERIENCE

Cognizant Technology Solutions — Programming Analyst, QA Automation Engineer

Pune, India

Client: Deutsche Telekom AG | Project: Process Testing

- Executed and contributed to Functional, Regression, Smoke, Integration, and E2E test cycles across telecom application modules per sprint.
- Manually executed 200+ test cases spanning happy-path, edge-case, and negative scenarios across service provisioning, order management, and account modules.
- Translated user stories and BRDs into structured test scenarios, using **ChatGPT/Claude** to brainstorm additional edge cases and boundary conditions before finalizing test design.
- Developed and maintained a 30+ case automated regression suite in Selenium WebDriver, Java, and TestNG using Page Object Model, eliminating repeat manual execution for the highest-churn workflows.
- Used **GitHub Copilot** within the IDE to accelerate authoring of Selenium/Java test scripts and boilerplate POM classes, speeding up automation development while maintaining code review standards.
- Configured TestNG parallel execution to run test suites concurrently, reducing overall test execution time.
- Identified coverage gaps each sprint and added new automation scenarios alongside active feature development.
- Participated in pre-release regression and smoke test runs; contributed to production readiness sign-off for every deployment.
- Wrote SQL queries to validate backend data integrity — verifying provisioning states and business rule enforcement directly in the database.
- Tested REST APIs in Postman covering authentication flows, error-response contracts, and service-to-service integration behavior.
- Traced data flows end-to-end across microservices to verify correct state transitions between provisioning and account modules.
- Refactored automation utilities — browser factory, test data handlers, and wait strategies — into reusable

components, reducing script maintenance overhead.

- Raised, triaged, and re-verified 25+ defects in JIRA over the years, drafting reproducible steps with logs and screenshots — using **ChatGPT/Claude** to tighten defect summaries and repro-step clarity for faster developer turnaround.
- Flagged untestable or ambiguous user stories during backlog grooming, preventing rework mid-sprint.
- Partnered with Developers and Business Analysts during defect triage to distinguish environment issues from genuine product bugs.

PROJECTS

ZigWheeler Automation Framework github.com/tiasa20/zigwheeler_automation

Stack: Selenium WebDriver, Java, TestNG, Maven, Git/GitHub, Extent Reports, GitHub Copilot

- Designed and built a scalable test automation framework using Selenium WebDriver, Java, and Page Object Model (POM), using **GitHub Copilot** to speed up boilerplate class and locator generation.
- Structured the framework around a data-driven layer, decoupling test data from test logic to allow parameterized execution across multiple input sets.
- Configured TestNG parallel execution to run multiple test classes concurrently, reducing total suite run time.
- Wired TestNG listeners to auto-capture screenshots on failure and feed results into Extent Reports, providing visual failure context without manual log-digging.
- Configured Maven for dependency lifecycle management; all test runs executable via a single mvn test command.
- Maintained full version history on GitHub with structured branching — repository organized for team onboarding and collaboration.

CERTIFICATIONS

- Selenium WebDriver with Java, Cucumber & Framework Design — Udemy
- Git & GitHub Essentials — Coursera
- ISTQB Foundation Level — In Progress
- Playwright with JavaScript — Currently Upskilling
- AWS Certified Cloud Practitioner — In Progress

EDUCATION

MCKV Institute of Engineering, Liluah, West Bengal 2019 – 2023

Bachelor of Technology — Electronics & Communication Engineering | CGPA: 9.33 / 10

Maria's Day School 2017 – 2019

Intermediate — Science | CGPA: 8.1 / 10

Maria's Day School 2015 – 2017

Matriculation — Science | CGPA: 8.6 / 10
