Profile

Software Engineer I at Parkar Digital with 1.8 years of experience in full-stack web development. Proficient in building scalable and high-performance applications using Next.js, React, TypeScript, and Python with a strong focus on clean architecture and intuitive user experiences. Skilled in both frontend and backend technologies including Node.js, Tailwind CSS, and RESTful APIs. Passionate about delivering impactful digital solutions that align with business objectives and drive user engagement.

Professional Experience

Software Engineer I 01/2024 | Pune, India

Parkar Digital (Project- Godaddy Domain Registry)

- Delivered 3 fully functional websites for the client from scratch, ensuring responsive design, cross-browser compatibility, and pixel-perfect implementation.
- Developed and integrated RESTful APIs into the client's enterprise-grade applications to ensure robust and seamless backend communication.
- Applied advanced performance optimization techniques such as lazy loading, dynamic imports, and code splitting resulting in significantly improved Lighthouse scores and load times.
- Implemented secure authentication and API protection using JWT, rate limiting, encrypted data handling and custom HTTP security headers.
- Engineered scalable, reusable UI components using TypeScript and Tailwind CSS, aligned with modern design systems and frontend architecture principles.
- Maintained pixel-perfect responsiveness across a wide range of devices, ensuring consistent UX for mobile and desktop users.

Projects

AI-Powered IT Ticket Diagnosis Assistant

- An intelligent system that automates root cause analysis and resolution suggestions using Azure OpenAI and Qdrant vector search. Integrated with a Next.js (TypeScript) frontend and Flask backend for real-time diagnosis and support ticket management.

Healthcare Management Platform

- A full-stack web application designed to manage patient records, appointments, and medical workflows. Ensured role-based access and responsive UI for doctors, patients, and administrators to streamline clinical operations.

Traffic Sign Recognition Using CNN

- Built a Convolutional Neural Network (CNN) model to recognize and classify various traffic signs from image data. Leveraged supervised learning on labeled datasets to achieve high accuracy, supporting intelligent transportation and autonomous vehicle applications.

Real-Time Vehicle-to-Vehicle Communication System

- Developed a real-time communication system using ESP32 microcontrollers that allows vehicles to share critical incident alerts such as landslides, accidents, or potholes. Incorporated a button-based trigger mechanism, where pressing the button instantly broadcasts the incident information to nearby vehicles. Used the HC-05 Bluetooth module for low-latency wireless communication, ensuring timely alerts and improved road safety through decentralized data sharing.

Skills

Programming Languages
JavaScript, Python, Typescript.

Version Control & Collaboration
Git, Github, Jira.

Database
MYSQL, MongoDB.

Web Technologies
HTML, CSS, REST API'S, Web Security(CORS, JWT).

Frameworks
React.js, Next.js, Tailwind CSS, Bootstrap, Flask.

Cloud/ Saas Platform
Vercel, Netlify, Render.

Education

B.Tech Electronics And Computer 08/2019 – 06/2023 | Pune, India

MIT ADT University, Pune

Certificates

- Microsoft Certified: Azure Fundamentals (June 2025)
