ANKIT KUMAR JAISWAL

Indore, Madhya Pradesh, India | +91 9131612918 | jaisankit0911@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Full Stack Developer with 3+ years of experience delivering end-to-end product features across React.js/TypeScript frontends and Python/Django backends. Proven track record integrating REST APIs, designing scalable cloud-native systems on AWS, and applying performance engineering best practices. Collaborative team player experienced in Agile delivery, code reviews, and cross-functional ownership — now expanding into AI feature integration and data-driven application development.

TECHNICAL SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), JSX, React Hooks, Functional Components, Redux Toolkit, Context API, State Management, Responsive Design, SSR/CSR

Backend & APIs: Python, Django, Django REST Framework (DRF), REST API Design, Secure Authentication (JWT, token-based), Input Validation, Error Handling, Microservices Architecture

Cloud & Data: AWS Lambda, DynamoDB, AWS Glue, PostgreSQL, Event-Driven Architecture, Real-Time Data Processing, Data Pipelines, Kafka (basic)

UI & Styling: Tailwind CSS, Material UI, Bootstrap, Mobile-First Design, Cross-Browser Compatibility

Testing & Quality: Jest, React Testing Library, Unit/Integration Testing, Debugging, Code Reviews, Performance Optimization

DevOps & Tools: Docker, Git, GitLab CI/CD, Agile/Scrum, SDLC, Estimation Techniques

AI Enablement: Python scripting, data transformation workflows, distributed systems, ML-ready pipeline design

PROFESSIONAL EXPERIENCE

Full Stack Developer | Tata Consultancy Services (TCS), Indore | *Nov 2022 – Present*

- Owned features end-to-end — from translating functional and non-functional client requirements into system-level designs, through implementation, unit testing, debugging, and production support — following Agile/Scrum methodologies.
- Designed and implemented scalable backend services and REST APIs using Python, Django, and Django REST Framework (DRF), with a focus on secure data handling, JWT-based authentication/authorization, and robust error handling.
- Built cloud-native, event-driven data pipelines using AWS Lambda, AWS Glue, and DynamoDB to support real-time data processing across healthcare and banking domains.
- Developed accessible, reusable UI component libraries using React.js and TypeScript with Redux Toolkit; applied performance engineering techniques including lazy loading, code splitting, and rendering optimization to improve UX across browsers and devices.
- Integrated frontend applications with backend APIs, managing state management, routing, and graceful error scenarios to deliver reliable user experiences.
- Wrote and maintained unit and integration test cases using Jest and React Testing Library; conducted code reviews and contributed to engineering standards and quality processes.
- Collaborated with backend, QA, DevOps, and product stakeholders to estimate work, manage priorities, and deliver iteratively; documented technical decisions clearly for cross-functional alignment.
- Containerized applications using Docker and maintained GitLab CI/CD pipelines to ensure scalable, consistent production-grade deployments on AWS.

Key Technologies: Python, Django, DRF, REST APIs, AWS Lambda, DynamoDB, AWS Glue, PostgreSQL, React.js, TypeScript, Redux Toolkit, Docker, Git, Jest

PROJECT EXPERIENCE

Data Marketplace Platform — Full Stack Developer | *Dec 2024 – Present*

- Designed and implemented scalable REST APIs and backend services for healthcare data workflows using Python, Django, and DRF — owning the feature from requirements analysis through deployment support.
- Built cloud-native, event-driven data processing workflows using AWS Lambda, AWS Glue, and DynamoDB to enable real-time data pipelines, applying distributed systems and architecture fundamentals.
- Developed data-driven frontend dashboards using React.js, Redux Toolkit, and TypeScript, with dynamic search, pagination, and tab indicators — optimising rendering performance and component maintainability.
- Improved system scalability and maintainability through modular architecture patterns and reusable component design across frontend and backend layers.

Technologies: Python, Django, DRF, REST APIs, PostgreSQL, DynamoDB, AWS Lambda, AWS Glue, Docker, React.js, TypeScript, Redux Toolkit, Git

Banking Management Platform — Frontend Developer | *Jan 2023 – Dec 2024*

- Built scalable, accessible frontend modules using React.js and TypeScript with component-driven architecture; applied performance engineering techniques to optimise rendering and API handling.
- Developed secure authentication flows and integrated REST APIs with token-based authentication, contributing to system security and reliability.
- Participated in code reviews, wrote unit test cases, and provided deployment support aligned with SDLC practices and quality standards.

Technologies: React.js, TypeScript, JavaScript, Redux Toolkit, Tailwind CSS, REST APIs, Axios, Jest, GitLab

GF Energy Website — gfenergy.in

- Developed a modern, mobile-first energy sector website with responsive design using Tailwind CSS and JavaScript.

Technologies: HTML5, CSS3, Tailwind CSS, JavaScript

EDUCATION

Master of Computer Applications (MCA) | *Vikrant University, India* | *CGPA: 7.2*
