GAJANAN MALUCHE

Software Development Engineer | Full-Stack & Distributed Systems

+91-7676824127 • gajanan.maluche71@gmail.com • www.linkedin.com/in/gajanan-maluche

PROFESSIONAL SUMMARY

Software Development Engineer with 2+ years of professional experience designing, coding, and shipping production software across full-stack web applications, backend microservices, and distributed infrastructure. Comfortable taking broadly-defined, ambiguous problems from design through deployment in fast-paced, weekly development cycles. Hands-on experience building scalable, fault-tolerant systems — including a from-scratch distributed infrastructure rebuild with service isolation and automated recovery — alongside enterprise SaaS and ERP platforms used by multiple concurrent clients. Strong agile delivery background with proven ability to lead engineers, own systems end-to-end, and learn new technical domains quickly.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, SQL, Python
- **Frameworks & Libraries:** React.js, Next.js, Node.js, NestJS, React Native,
- **Systems & Architecture:** Microservices Architecture, Distributed Systems, REST API Design, Event-Driven Architecture, Fault-Tolerant System Design
- **Databases:** MySQL, PostgreSQL, Prisma ORM, Database Design, Query Optimization, Schema Management, MongoDB
- **Cloud & Infrastructure:** Docker, Docker Compose, Linux, Nginx, Proxmox VE, TrueNAS, Cloudflare/CDN, SSL/TLS
- **Engineering Practices:** Agile/Scrum, Git, Code Reviews, CI/CD-Style Deployment, Incident Response
- **AI & Automation:** LLM Integration (GPT-4, Ollama), n8n Workflow Automation

WORK EXPERIENCE

Full-Stack Developer (SDE) | *Playtech, Belagavi* **Apr 2024 – Present**

- Designed and built multi-module SaaS and ERP platforms from ambiguous requirements through to production, architecting microservices, REST APIs, and relational database schemas (MySQL, PostgreSQL) used by multiple institutions and clients concurrently.
- Led a team of 4 engineers through technical design, code reviews, and agile delivery cycles — shipping new features on week-over-week development cycles rather than long release cadences.
- Owned the full software development lifecycle for multiple concurrent products — requirement analysis, system design, coding, testing, containerized (Docker) deployment, and post-launch support — balancing scalability, reliability, and cost.
- Built fault-tolerant, event-driven automation pipelines (n8n) and LLM-integrated services (GPT-4, Ollama) to process real-time business workflows at scale.

Full-Stack Developer Trainee | *Playtech, Belagavi* **Jan 2024 – Mar 2024**

- Designed and coded production features in React.js, Node.js, and REST APIs within a live, fast-moving codebase, contributing to database schema design under senior engineer guidance.
- Provided technical support and incident response for production systems (Koha ILS, InOutPlus), maintaining uptime under real customer load.
- Rapidly ramped up on NestJS, Prisma ORM, Docker, and TypeScript, shipping production code within 3 months — demonstrating fast learning in unfamiliar technical domains.

KEY PROJECTS

Data Center Recovery & Distributed Rebuild — *Proxmox VE, Nginx, TrueNAS, Distributed Systems*

- Rebuilt a compromised production data center as an isolated, redundant distributed system from scratch: provisioned per-service VMs, segmented the network, and implemented automated backup/recovery — eliminating the single points of failure that enabled the original breach.

- Led forensic-level incident response under live downtime pressure, recovering critical data and restoring multiple production services (Koha ILS, DSpace, OJS) with zero data loss.

InOutPlus – Multi-Institution SaaS Platform — *Next.js, NestJS, Microservices, MySQL, Docker*

- Architected a multi-module, multi-tenant platform (attendance, library OPAC, notifications, admin dashboards) designed to scale across multiple institutions running concurrently; led delivery from requirement gathering to go-live.

PEB Manufacturing ERP — *NestJS, React.js, PostgreSQL, REST APIs, Docker*

- Built an end-to-end ERP system (estimation, scheduling, inventory, costing) handling concurrent multi-user load; automated complex business logic, cutting estimation turnaround time by over 70%.

TechAds – Real-Time Distributed Analytics Platform — *React.js, Node.js, WebSockets, Real-Time Sync*

- Built a real-time, multi-location system synchronizing live data across distributed displays and dashboards via WebSockets, handling concurrent updates at scale.

AI & Automation Solutions — *GPT-4, Ollama, n8n, Event-Driven Architecture*

- Engineered event-driven, LLM-powered automation pipelines (GPT-4, Ollama, n8n) for asynchronous, fault-tolerant business workflows.

Catalog Plus – POS & Catalog System — *Next.js, NestJS, MySQL, CDN, Barcode Workflows*

- Built a catalog management and POS platform with barcode-based inventory sync and CDN-backed, horizontally scalable file storage.

EDUCATION

Bachelor of Computer Applications (BCA) 2020 – 2023

CGPA: 8.2

CORE COMPETENCIES

Software Development Engineering • Distributed Systems & Microservices Architecture • Scalable System Design • Full Software Development Lifecycle • Agile/Scrum Delivery • Problem-Solving Under Ambiguity • Incident Response & Fault Tolerance • Cross-Functional Collaboration • Database Design • REST API Design
