Pune, Maharashtra, India

Professional Summary

AI & Data Science undergraduate with hands-on experience building ETL pipelines, SQL data warehouses, and ML models. Skilled in Python, SQL, and Power BI, with proven results including a 95% -accuracy classification model trained on 44,000+ records and a production-style Medallion Architecture data warehouse. Seeking Data Analyst roles to apply data-driven problem solving at scale.

Technical Skills

- **Languages:** Python, C++, SQL,
- **Tools & Platforms:** Git, GitHub, , VS Code, Power BI, Microsoft SSMS, **Azure Fundamentals**
- **Data & Analytics Libraries:** Pandas, NumPy, Matplotlib, Excel, Power BI
- **Databases:** MySQL, SQL Server, Qdrant Vector Database
- **Data Engineering:** ETL Pipelines, Data Warehousing, Medallion Architecture, Star Schema, Data Modeling

Projects

Retail Sales & Operations Analytics Dashboard | *Power BI, Power Query (M), DAX* | GitHub July 2026

- Designed an enterprise-style Power BI semantic model using a Galaxy (Constellation) Schema, integrating 6 fact tables and 6 dimension tables across 24 relationships spanning Sales, Fulfillment, Inventory, Marketing, Promotions, and Targets.
- Built interactive executive dashboards tracking Total Sales, Profit, Units Sold, Average Order Value, and Sales Growth % across regions and product categories.
- Developed fulfillment and inventory analytics measuring Average Delivery Time, On-Time Delivery %, and Inventory Coverage across the order lifecycle.
- Created marketing and target-tracking KPIs including Campaign ROI and Target Achievement %, enabling cross-domain analysis such as campaign impact on stockouts.
- Authored 10 reusable DAX measures organized in a dedicated measures table and version-controlled the entire model using Power BI's text-based .pbip project format.

RAG - App | *Python, FastAPI, Streamlit, Inngest, Qdrant, Gemini API* | GitHub June 2026

- Built an end-to-end Retrieval-Augmented Generation pipeline that ingests PDFs and splits them into 1,000-token semantic chunks with 200-token overlap using LlamaIndex for accurate context retrieval.
- Generated 3,072-dimension vector embeddings using Google's Gemini embedding model (`gemini-embedding-001`) and indexed them in Qdrant Vector Database with cosine-similarity search.
- Architected an event-driven ingestion and query workflow using Inngest and FastAPI, applying request throttling (2/min) and per-source rate limiting (1 per 4 hours) for durable, asynchronous execution.
- Implemented top-5 semantic retrieval integrated with the `gemini-2.5-flash` model to generate concise, context-grounded, source-attributed answers.

ML - Based Fake News Detection System | *Python, XGBoost, NLP, TF-IDF, Flask, NewsData API* 2025

- Developed a machine learning-based fake news detection system using XGBoost and NLP techniques, achieving 95% classification accuracy on 44,000+ news articles.
- Performed text preprocessing including tokenization, stop-word removal, stemming, and TF-IDF feature extraction to optimize model input quality.
- Deployed the trained model via a Flask web application with live data ingestion through the NewsData API for real-time classification.

Education

K.K. Wagh Institute of Engineering Education and Research Nashik, India
B.Tech – Artificial Intelligence and Data Science | CGPA: **7** *2022 – 2026*

Certifications

DBMS Course – Master the Fundamentals and Advanced Concepts, Scaler Topics January 2026
