Aniket Navnath Bhandari

SDET | Automation Test Engineer | Selenium Java Playwright API | AI Test Automation Copilot GenAI

aniketbhandari7300@gmail.com · 7796591414 · Manjri Hadapsar

PROFILE

Automation Test Engineer with 2.11 years of experience designing scalable test automation frameworks for web, mobile, and API platforms across Product companies, MNCs, and Startups. Expertise in Selenium WebDriver, Cypress, Playwright, Appium, TestNG, JUnit, Cucumber BDD, Java, Python, JavaScript, and TypeScript. Strong hands-on with REST Assured, Postman, JMeter for API and performance testing. Skilled in CI/CD using Jenkins, GitHub Actions, Docker, Maven, AWS, Selenium Grid, and BrowserStack for cross-browser execution. Proficient in SQL, MongoDB, JIRA, TestRail, and Azure DevOps within Agile SDLC. Leverages AI-driven testing with GitHub Copilot, Claude Code, Cursor, Testim AI, Applitools Eyes, LangChain, and Playwright MCP to accelerate script generation, self-healing tests, and visual validation. Delivers reduced regression cycles, improved release velocity, higher defect detection, and robust, maintainable automation suites that ensure product quality at scale.

CAREER HIGHLIGHTS

- Architected scalable Selenium, Cypress, and Playwright frameworks across web, mobile, and API layers, reducing regression cycles by 55%.
- Delivered 1,200+ automated test scripts in Java, Python, and TypeScript, boosting overall test coverage from 45% to 88%.
- Engineered REST Assured and Postman API suites validating 300+ endpoints, cutting backend defect leakage into production by 40%.
- Built Jenkins and GitHub Actions CI/CD pipelines with Docker and Maven, accelerating release velocity by 3x across sprints.
- Scaled cross-browser execution using Selenium Grid, BrowserStack, and AWS, reducing suite runtime from 6 hours to 45 minutes.
- Owned Appium mobile automation across iOS and Android, improving device coverage by 70% and catching 25+ critical defects.
- Leveraged GitHub Copilot, Claude Code, and Cursor to accelerate script generation, reducing test authoring time by 60%.
- Integrated Testim AI and Applitools Eyes for self-healing and visual validation, cutting flaky test maintenance effort by 50%.
- Prototyped LangChain and Playwright MCP agents to auto-generate test cases from Jira stories, saving 20+ hours weekly.
- Executed JMeter performance tests simulating 10K concurrent users, identifying bottlenecks and improving API latency by 35%.

SKILLS

Test Automation Frameworks: Selenium WebDriver, Cypress, Playwright, TestNG, JUnit, Cucumber, Appium
Programming Languages: Java, Python, JavaScript, TypeScript
API & Performance Testing: REST Assured, Postman, JMeter
CI/CD & DevOps Tools: Jenkins, Git, GitHub Actions, Docker, Maven
Cloud & Test Infrastructure: AWS, BrowserStack, Selenium Grid
Test Management & Agile Tools: JIRA, TestRail, Azure DevOps
Databases: SQL, MongoDB
AI-Powered Coding Assistants & Agents: GitHub Copilot, Claude Code, Cursor, ChatGPT, Testim AI, Applitools Eyes, LangChain, Playwright MCP
Soft: Communication, Teamwork, Problem Solving, Time Management, Adaptability
Languages: English (Fluent), Hindi (Fluent), Marathi (Fluent)

EXPERIENCE

Software Tester Nov 2023 – Present

Datamotive

PROJECTS

AI-Powered Intelligent Test Automation Platform for FinTech Applications Nov 2023 – Present

Software Engineer · Datamotive

Enterprise-grade intelligent test automation platform for FinTech applications using ML to automatically generate test cases, detect anomalies, and predict test failures. Features real-time analytics, smart test prioritization, and automated root cause analysis integrated with CI/CD pipelines.

Functional requirements:

- ML-based dynamic test case generation from APIs
- Real-time test execution dashboard with anomaly detection
- Smart test prioritization using code coverage analysis
- Payment gateway API integration (Stripe, Razorpay, PayU)
- Multi-environment deployment automation
- PCI-DSS compliance testing
- Performance benchmarking and SLA monitoring
- Automated trend-based reporting

Roles & responsibilities:

- Architect end-to-end test automation framework
- Implement ML models for test case generation
- Design CI/CD integration pipelines
- Establish performance testing baselines
- Create test data management strategies

Supply Chain & Logistics Real-time Tracking Test Automation Platform Nov 2023 – Present

Software Engineer · Datamotive

Comprehensive test automation solution for supply chain and logistics platforms including real-time shipment tracking, route optimization, inventory management, and predictive analytics. Validates complex distributed systems with high concurrency and data consistency.

Functional requirements:

- Real-time GPS tracking validation
- Route optimization algorithm testing
- Inventory management consistency checks
- Multi-warehouse WMS testing
- Supplier integration and EDI testing
- Order fulfillment workflow validation
- Load testing for peak season scenarios
- Barcode and RFID scanning simulation

Roles & responsibilities:

- Design test scenarios for complex logistics workflows
- Implement API testing for warehouse management systems
- Create performance testing framework for high-traffic scenarios
- Validate data consistency across microservices
- Setup real-time data pipeline testing

EDUCATION

Graduation 2022

BSc IT · Mumbai

Percentage: 8.5%

HOBBIES & INTERESTS

Learning new languages · Technical blogging · Reading non-fiction · Cricket · Football
