PROFESSIONAL EXPERIENCE

Software Engineer **ATDev Services PVT. LTD |** Sept 2022 – Ongoing

- Spearheaded frontend and backend development for **Integration** and **Monitoring** platforms, owning architecture, feature delivery, and code standardization.
- Built and maintained backend services using **Spring Boot**, with secure, scalable APIs and **MySQL** database management ensuring high data integrity. Designed and deployed the UI layer using **JavaScript**, **HTML5**, and **CSS3**, delivering clean and responsive user experience.
- Developed and containerized microservices using **Docker** and implemented **Kong Gateway** for centralized API traffic management.
- Created integration samples with **Postman** collections, showcasing API workflows.
- Led implementation of **webhooks**, managing full event-driven lifecycle across services within the integration platform.
- Developed a **Python**-based application to support Retrieval-Augmented Generation (**RAG**) pipelines: Processed and chunked unstructured documents (PDF, TXT) for vector embedding. Implemented full CRUD operations on vector stores (**Chroma**/**PGVector**), enabling efficient search, retrieval, and updates. Built a feedback loop module to iteratively improve retrieval accuracy based on user interactions.
- Wrote and executed unit tests with **TestNG** and **Mockito**, ensuring high reliability across service modules.
- Authored detailed technical and user **documentation** for both internal engineers and external partners to support faster platform adoption.

PROJECTS

SecureComm Shield | JavaFX, Spring boot, Java, Hibernate, SQLite, MySQL, Thymeleaf, Postman, REST-API, Docker, Traefik, Web sockets

- Developed a secure chat application with end-to-end steganographic encryption and session-based messaging (auto-expiry after 6 hours).
- Implemented a malware-scanning download panel using sandboxing to safely fetch and inspect external files.
- Integrated Docker for containerization and Traefik for dynamic reverse proxy and load balancing.

Personal Blog Platform | Django, Python, JavaScript, SQLite, HTML5, CSS3, Bootstrap

- Built a feature-rich blog platform with user registration, post creation, editing, deletion, and commenting.
- Enabled user profiles, like functionality, and a responsive UI using Bootstrap. Designed scalable Django-based backend for secure and modular architecture.

News Aggregator App | ReactJS, REST-API, JavaScript, HTML5, CSS3, Bootstrap

- Developed a React-based SPA to display top news by category via News API integration. Built responsive, card-style layouts with genre-wise filtering and infinite scroll.
- Employed REST APIs to ensure real-time updates and optimal UX.

TECHNICAL SKILLS

Languages: C, C++, Java, Python, HTML5, CSS3, PHP, JavaScript, SQL, Bash.
Technologies: React.js, Spring Boot, jQuery, Django, Bootstrap, Node.js, MySQL, MongoDB, Fast API, JavaFX, SQLite, Postman, Docker, JDBC, Hibernate, Kong API gateway, GIT, Jira, Mockito, TestNG, RabbitMQ, Web Sockets, Webhooks, LangChain, OpenAI API, PGVector, PostgreSQL
Concepts: Computer Networking, Operating System, RESTful API, Microservices, Agile Methodology, Software Testing, Agentic AI, RAG (Retrieval-Augmented Generation), Chunking Strategies, Vector Embeddings, Multi-Component Pipelines (MCP)

ACHIEVEMENTS

- 1st Prize – IBM-ICE Day Poster Presentation (AI in Agriculture).
- 7th Place – SUNHACKS-2022 International Hackathon (250+ teams).

CERTIFICATIONS

React (Basic) | Python (Basic) | Javascript (Intermediate) | Operating System Fundamentals (NPTEL)

EDUCATION

Sandip University, Nashik August 2024
B.Tech in Cyber Security and Forensics – (CGPA: 8.5) Nashik, India
