QA Engineer

Bhagyashri Rahul Guntiwar

Contact No: +918767285639

Email Id:- guntiwarb03@gmail.com

PROFILE OVERVIEW

Experienced QA Engineer with around 3 years of expertise in Manual and Automation Testing. Proficient in test planning, execution, and defect management using tools like JIRA, Selenium WebDriver and Postman. Strong knowledge of SDLC, STLC and Agile, Scrum methodologies. Demonstrates excellent problem-solving abilities and a proven track record of delivering high-quality software solutions.

TECHINCAL SKILLS

- **Testing**:- Functional Testing, Automation Testing (Selenium WebDriver with TestNG), Manual Testing Regression Testing, Sanity Testing, Smoke Testing, UAT.
- **Tools**:- JIRA, Postman, GitHub, Maven, Eclipse, VSCode, PyCharm.
- **Languages**:- Core Java, Python, SQL.
- **Database**:- SQL Server.
- **Frameworks**:- Data Driven Framework, TestNG.
- **Concepts**:- SDLC, STLC, Defect Tracking, API Testing, OOPS, Collections.
- **Methodologies**: - Agile (Scrum), CI/CD Familiarity.
- **Platforms**: Web & Mobile Applications.

PROFESSIONAL SUMMARY

- Experienced in **Manual Testing** with strong knowledge of defect management tools such as **JIRA**.
- Good understanding of **Software Development Life Cycle (SDLC)** and **Software Testing Life Cycle (STLC)**.
- Proficient in analysing requirements, identifying **test scenarios**, designing **test cases**, and preparing comprehensive test documentation.
- Skilled in identifying, reporting, tracking, and managing defects by analyzing **severity and priority**.
- Hands-on experience working in **Agile (Scrum) methodology** with cross-functional teams.
- Experienced in performing various types of testing including **Functional, Compatibility, Database, Regression, and End-to-End testing**.
- Experience in testing **Web and Mobile applications**.
- Good knowledge of writing and executing **SQL queries** for database validation using **SQL Server**.

- Collaborated with Business Analysts and development teams to understand functional requirements and deliver quality test solutions.
- Strong understanding of **Core Java concepts**, including **OOPs, Collections, and String handling**.
- Hands-on experience with **Selenium WebDriver using Java** for web application automation.
- Experienced in identifying web elements using different locators, especially **XPath**.
- Good understanding of **TestNG framework**, annotations, assertions, and execution priorities.
- Familiar with **Maven build management framework** for project automation.
- Experience in performing **API testing using Postman**.
- Hands-on experience in automating web applications using **Selenium WebDriver with TestNG framework**.
- Experience working with version control and repository management tools such as **GitHub**.

WORK EXPERIENCE

Syscryption Technologies Pvt Ltd, Pune **May 2022 – till Date**

Software Test Engineer

Project:- Insurent

Project Domain:- Insurance

Team Size:- 10

Project Description: -

The Indian origin insurance company is a leading provider of general insurance. The scope of this project was to build a customer's claims division, which would meet the reporting requirements of all the business functions within the scope of operations. It provides insurance operations of below line of business.

- Motor
- Health

Responsibilities:

- To understand requirement.
- Preparing Test Scenarios.
- Responsible for Regression, Integration Testing.
- Retesting the cases where defect has been raised.
- Involve in daily calls to co-ordinate the requirements with onsite team.
- Involve in System and functional Testing.
- Defect/bug tracking using Jira Tool.
- Involve in Sprint Planning meeting.

Project: OCR (Optical Character Recognition)

Project Domain: Healthcare

Project Description:-

The OCR project focused on automating data extraction from various document images such as Aadhaar Card, PAN Card, Driving Licence, ITR Forms, and Form 60. In Phase-2, the goal was to enhance the accuracy and robustness of the YOLOv8 deep learning model for detecting key-value fields even from new, unseen images. The image preprocessing was done using OpenCV, and PyTest was used to extract text. The extracted data was then structured and stored in a MySQL database through REST APIs built with Django Rest Framework. The system aimed to support real-time document processing for applications such as identity verification and financial form digitization.

Responsibilities:

- Analyzing and understanding the OCR and document processing requirements.
- Preparing detailed test scenarios and test cases for various documents like Aadhaar, PAN,
- Driving Licence, ITR, etc.
- Performing functional, system, and integration testing on the OCR pipeline.
- Validating field detection using YOLOv8 and text extraction.
- Performing regression testing after model updates or script changes.
- Testing Django REST APIs for correct data submission and response.
- Validating database entries in MySQL after data extraction.
- Retesting and verifying bugs after defect fixes.
- Performing image enhancement validation using OpenCV.
- Involved in sprint planning and daily stand-up calls with the team.
- Logging and tracking defects using Jira tool.
- Writing test cases and preparing test data for different formats and edge cases.
- Involved in sanity testing on stage and production environments.
- Coordinating with the development team for issue resolution and model output
- clarifications.
- Involved in release planning and QA sign-off process.
- Participating in automation testing and helping in script validation

DECLARATION

I hereby declare that all the information provided by me is true to the best of my knowledge.
