Profile

Software Developer with 2+ years of experience in building scalable web applications using React.js, Node.js, Express.js and Python. Proficient in full-stack development, database management (MySQL, MongoDB), and cloud platforms like AWS. Strong expertise in code optimization, troubleshooting, and Agile collaboration. Seeking challenging opportunities in product-based companies to leverage expertise in scalable application development.

Professional Experience

Software Engineer, *(Mind Your Fleet)* **Noida** *02/2024 - present*

- Developed and launched a multi-channel communication system for end-to-end B2B spot rental booking management.
- Leveraged event-driven architecture to handle dynamic messaging needs (WhatsApp and Email) across stakeholders (client helpdesk, travelers, rental helpdesk, drivers), ranging from booking initiation to invoicing/receipt generation.
- Optimized fare module by implementing quick-edit functionality, simplifying fare updates for B2B rental operations.
- Built a rule-based penalty module for B2B car rentals allowing buyers to auto-impose fines for delays, cleanliness issues, and service violations.
- Built a bid-based Query Module where vendors submit offers for booking requests, and bookings are created automatically upon buyer acceptance. Supported reverse conversion from booking to query.
- Technologies Used: Javascript, Node.js, Express.js, React.js, MySQL, Sequelize, Whatsapp Cloud Api

Software Developer, *(Sandy and Co)* **Agra** *03/2023 - 02/2024*

- An advanced AI-based LMS system for data gathering based on various performance parameters, comparative analysis of gathered data for candidate performance prediction analysis.
- Developed and integrated various RESTful APIs for login, authentication, and profile management.
- Streamlined data transfer and interaction between front-end and back-end systems, increasing data retrieval speed by 50% and reduced server load by 30%
- Managed and deployed projects on Amazon Web Services (AWS EC2) and implemented Load Balancer

Backend Developer Intern, *(Hoogaaa Private Ltd)* **Kanpur** *11/2022 - 02/2023*

- Designed a comprehensive ticket booking system similar to IRCTC that enables users to search, book, and manage train tickets seamlessly.
- Implemented full-stack solutions, from front-end design using React.js to back-end development with Node.js and Express.js.
- Utilized Amazon Web Services (AWS) EC2 instances to host the application, ensuring scalability and high availability.

Skills

- **Fields of Expertise:** Backend Development, Frontend Development, Full Stack Development, MERN Development
- **Programming Language:** C++, JavaScript, Python, OOPs, STL
- **Backend Development:** Node.js, Express.js, Sequelize, Mongoose, SQL, MongoDB
- **Frontend Development:** HTML, CSS, Bootstrap, React.js, Material UI
- **Course Work:** Data Structures and Algorithms, DBMS, Operating System
- **Cloud Services(Familiar):** AWS(EC2, ECR, S3 Bucket, Load balancing)
- **Tools:** Git, Github, Bitbucket, VS Code, Postman
- **AI Tools:** Chatgpt, Claude (via Web & CLI), Deepseek

Project

Trading App

- Designed and implemented an automated trading algorithm using Node.js and Kite Connect APIs.
- Increased profitability by improving trading efficiency through pre-defined trading strategies, stop-loss trailing, and minimal latency trade executions.
- Developed adaptive strategies to adjust algorithm parameters basis historical and real-time market data.

Education

BTech (CSE) *Dr A.P.J Abdul Kalam Technical University* **Lucknow, India** *2019-2023*
