PROJECTS

1) Al Ramz Investment CRM Transformation

Al Ramz implemented a customized Microsoft Dynamics 365 CRM to enhance client engagement, automate investment services, and ensure secure, transparent operations. This solution gives clients full visibility into their portfolios, supports secure and compliant operations, and delivers a seamless, trusted investment experience.

Platform: MS Dynamics CRM 365, Power Platform (Power Apps, Power Automate), MS CRM SDK, Visual C#.Net, ASP.Net, JavaScript, HTML, CSS, Custom and Out-of-the-box APIs.

Roles and Responsibilities:

- Managed complete end-to-end implementation of the CRM project.
- Responsible for requirement analysis, solution design, and delivery.
- Design and development MS CRM applications.
- Built and configured custom entities, relationships, forms, and views to support core business processes.
- Created and deployed client-side scripting using JavaScript, as well as server-side business logic through plug-ins and custom workflows.
- Designed and implemented Power Automate flows to streamline task automation, trigger alerts, and deliver in-app notifications.
- Developed secure and scalable custom APIs to integrate CRM with internal databases and third-party systems.
- Utilized out-of-the-box (OOB) APIs for efficient data access and integration across various modules.
- Created, customized and implemented new critical requirements using Plug-ins, and JavaScript.
- Integrated CRM 365 with external systems using MSCRM SDK using .NET library.
- Managed solution packaging, deployments, and environment transitions (Dev, QA).
- Provided regular project updates and reporting to the client's project manager.
- User training and user support.
