ROHIT YADAV

PYTHON REACT DEVELOPER

veerrjo9754@gmail.com | +91 8461974403

SUMMARY

Fullstack Developer with **3.4 years** of hands-on experience in designing and developing scalable, high-performance web applications using **Django**, **FastAPI**, **Reactjs** and **RESTful APIs.** I specialize in building responsive and high-performance web applications.

PROFESSIONAL SKILLS

Python	Django	React js	FastAPI	GenAI	RAG
HTML & CSS & JS	MySQL	REST API	AWS AI Services	Git/GitHub	

WORK EXPERIENCE

FULLSTACK DEVELOPER

(2023 - Present)

Desprin Enterprises Pvt. Ltd

Developed and maintained scalable full-stack web applications using Python (Django, FastAPI) for backend and React for frontend, with a strong focus on performance, security, and reliability. Designed and implemented RESTful APIs for seamless integration while building responsive and user-friendly interfaces to deliver smooth end-to-end experiences.

SOFTWARE DEVELOPER (INTERN)

(2022 - 2023)

Techsimplus Learnings

Started my career as an intern, working on **Python** and **Django** to develop web applications. Gained hands-on experience in backend development, building and enhancing application functionality, optimizing performance, and ensuring smooth **API** integrations.

EDUCATION

BACHELOR OF ENGINEERING (CS) (2019 - 2023)

Bansal College Of Engineering

PROJECTS

1. Suryoday Internet Banking

Description:

Built a secure Internet Banking platform using Django (DRF) and React with multi-account support (Saving, Current, Salary, FD, RD, Business). Implemented secure login with MPIN/User ID and developed REST APIs for real-time account and transaction data. Designed a responsive dashboard for viewing balances, transactions, and performing fund transfers.

Skills: Python, Django, React, Django REST Framework, MySQL, RESTful APIs, Git, Postman

Roles & Responsibilities:

- Developed a secure login and authentication system using Django and Django REST Framework.
- Created RESTful APIs to deliver real-time account and transaction data to the frontend.
- Designed and optimized database models for managing users, accounts, and transactions.
- Implemented transaction features such as fund transfers and bill payments.
- Built reusable backend modules to enhance development efficiency and maintainability.
- Ensured data security, performance optimization, and seamless user experience throughout the platform

2. Zelda - Truck Products Ecommerce Project

Description:

This Project is a Ecommerce project to handle the Truck products. User can search the product by multiple categories, user can add the Products into cart and can make orders. User can see related and recent products. User can filter the products by brands and multiple categories.

Skills: Python, Django, JavaScript, React, Django REST Framework , MySQL, RESTful APIs, Git, Postman

Roles & Responsibilities:

- Integrated RESTful services for frontend consumption using Django REST Framework.
- Designed and implemented Class-Based and Function-Based Views for handling product, cart, and order operations.
- Built reusable backend modules for categories, brands, and filtering to optimize code maintainability.
- Created dynamic, responsive frontend components in React, integrated APIs, and optimized UI/UX for seamless user experience.
- Developed APIs for search, filtering, related products, and recent products to enhance user experience.
- Implemented cart management and order processing logic ensuring secure and seamless transactions.

3. Vender Management System

Description:

A Dashboard to manage the admin, Vendors , job and candidate and run the recruiting agency easily.Here Super admin can add sub admin , and sub admin can add Vendors who provides the candidate to the particular job the assign by the sub admin to a particular vendor.

Skills: Python, Django, Django REST Framework, MySQL, RESTful APIs, Git, Postman

Roles & Responsibilities:

- Responsible for building the complete Admin Dashboard, including login screen, admin form, vendor form, and candidate form.
- Developed and integrated all RESTful APIs to perform CRUD operations for admins, vendors, jobs, and candidates.
- Implemented JWT-based authentication and authorization for secure login and session management.
- Built and managed protected routes to ensure only authenticated users access sensitive features.
- Applied role-based authorization to control access levels for super admin, sub-admins, and vendors.

4. Covid'19 Vaccination Management Panel

Description:

In this project client can add multiple Vendors and operators. How will manage all the Vaccination process. Client can manage the stock of vaccines and manage the users. Client can create multiple operators. When operator will login, they will get scan Qr Code option. When operator will scan Qr, it will ask for Mobile Number and Verification Process. Then operator will assign one vaccine for the patent. And it will revert back to main page.

Skills: Python, Django, Django REST Framework, JWT Authentication, Role-Based Access Control, MySQL, RESTful APIs, QR Code Integration, Git, Postman

Roles & Responsibilities:

- Wrote reusable, testable, and efficient code, designing views using both Function-Based and Class-Based Views in Django.
- Utilized Python and Django to design secure server-side applications, and collaborated with frontend team using HTML, CSS, and JavaScript for client interfaces.
- Built all database mapping classes with Django ORM to manage vaccine stock, users, vendors, and operators.
- Used both Function and Class based views.
- Developed RESTful services to perform complete CRUD operations for vaccination management workflows.
- Created screen-wise serializers to deliver data in specific JSON formats required by the UI team.

5. EduPortal - Course Management System

Description:

The Course Management System is a web application that allows administrators to manage courses, track students, and facilitate course enrollment. Students can browse courses, register, and track their progress. Administrators can create, update, and delete courses, and view enrolled students.

Skills: Python, Django, FastAPI, Django REST Framework, JWT Authentication, MySQL, RESTful APIs, QR Code Integration, Git, Postman

Roles & Responsibilities:

- Developed the Course Catalog module enabling students to browse, search, and filter available courses.
- Implemented user authentication and authorization for both students and administrators using JWT.
- Built the Admin Dashboard to manage courses, student records, and enrollment workflows.
- Designed and integrated RESTful APIs for course data management and student registrations.
- Created student profile modules where students can view enrolled courses, grades, and progress.
- Ensured responsive UI by collaborating with frontend team using Bootstrap for seamless access across devices.
- Optimized backend logic and database queries to ensure scalability and performance.
