Rohit Patil

Senior Software Test Engineer / QA Automation Engineer

Kharadi, Pune, 411014, India | 8657809008 | rohitpatil2901@gmail.com | https://www.linkedin.com/in/rohit-patil-9b0232228/ | github.com/rohitpatil2901

PROFESSIONAL SUMMARY

QA Automation Engineer with 4+ years of experience building Selenium/Java automation within hybrid frameworks, backend API and database testing (Postman, SQL, MongoDB), and Jenkins CI/CD pipelines. Experienced in AWS-based environment monitoring, Agile SDLC/STLC, and cross-functional collaboration across HRTech and Banking platforms.

TECHNICAL SKILLS

Automation: Selenium WebDriver, POM Design Pattern, Hybrid Framework, BDD Cucumber

Testing Frameworks: TestNG

Programming: Java (OOP concepts)

API Testing: Postman

Database: SQL, MongoDB, Database Migration Testing

Performance Testing: JMeter

CI/CD: Jenkins

Cloud: AWS (EC2, S3, CloudWatch)

Version Control: Git, GitHub

AI & Productivity Tools: GlenAI, ChatGPT, GitHub Copilot, Google Gemini, Claude — used for test-case generation, script optimization, log analysis, and documentation

Test Management: JIRA, HP ALM 11

Build Tools: Maven (pom.xml, dependency management)

PROFESSIONAL EXPERIENCE

Senior Software Test Engineer | Harbinger Group*Aug 2025 – Present*

- Developed and maintained UI automation scripts using Java, Selenium, and TestNG within a hybrid automation framework, extending coverage to new feature areas for each sprint.
- Performed backend API testing using Postman and SQL, validating API responses, database records, and end-to-end data integrity across application workflows.
- Integrated automated test execution with Jenkins CI/CD pipelines and Git-based version control, supporting continuous testing of regression and feature-level automation suites.
- Utilized AWS services (EC2, S3, CloudWatch) for environment management, file handling, and application log monitoring to support testing and troubleshooting.
- Participated in Agile ceremonies — sprint planning, daily stand-ups, reviews, and retrospectives — collaborating with developers and product owners to scope test coverage and report defects throughout the sprint lifecycle.
- Supported the migration of application data from SQL to MongoDB, validating migrated records and data integrity through database testing.
- Leveraged AI Tools to Accelerate Test Case Generation, optimize automation scripts, and streamline log analysis and test documentation, improving overall testing efficiency.

Software Test Engineer | Nityo Infotek*Nov 2022 – Aug 2025*

- Automated regression test scripts using Core Java and TestNG for the Heidrick HR Onboarding platform (Infor HRMS), reducing repetitive manual test execution.
- Implemented the Page Object Model (POM) design pattern to improve script maintainability and reuse.
- Executed API testing in Postman across GET, POST, PUT, and DELETE requests to validate service responses.
- Validated application logs in CloudWatch and Sumo Logic within an AWS Workspace environment to support defect triage.
- Load-tested API performance using JMeter to identify response-time and stability issues.
- Translated Agile user stories into QA tasks, covering requirement analysis, test case creation, execution, and defect reporting.

Jr. Quality Analyst | PRM Software Solutions*Jan 2022 – Oct 2022*

- Designed and executed manual test cases, test scenarios, and defect logs in Jira for the ZPFMS fund monitoring platform (Banking domain).
- Built and maintained a BDD automation framework integrating Cucumber, Selenium, and Java for scenario-based test automation.
- Planned and scoped testing activities across release cycles using SDLC, STLC, and Agile methodologies, partnering with cross-functional teams in sprints and daily stand-ups.
- Executed UI and API testing to validate data integrity and end-to-end transaction flows.
- Updated and redesigned test cases to reflect evolving project requirements, reducing test debt.
- Performed Smoke, Sanity, and Regression testing to validate build stability prior to release.

PROJECTS

Heidrick HR Onboarding — Infor HRMS (HRTech)

Tech Stack: *Java, Selenium, TestNG, Maven, Postman, JMeter, AWS CloudWatch, Sumo Logic*

Onboarding platform automating task management and new-hire assessments across client organizations.

- Built a Selenium + TestNG automation suite following the POM design pattern for platform workflow validation.
- Validated API performance under load using JMeter and monitored system logs via CloudWatch and Sumo Logic.
- Executed full API test coverage (GET/POST/PUT/DELETE) in Postman to verify backend service behavior.

Fund Monitoring System (ZPFMS) — Tribal, Banking Domain

Tech Stack: *Java, Selenium, Cucumber (BDD), Jira, SQL*

Employee-facing government platform tracking allocation and utilization of Maharashtra state scheme funds.

- Developed a Cucumber BDD automation framework integrated with Selenium and Java for scenario-based regression testing.
- Owned manual and automated UI/API test coverage, ensuring end-to-end data integrity across onboarding workflows.
- Logged and tracked defects in Jira through full resolution, collaborating with developers in Agile sprints.

EDUCATION

BCA — Shivaji University, Kolhapur, India

CERTIFICATIONS

- Tricentis Tosca — Level 2
- Selenium with Java — Advanced
