Professional Summary

Experienced and results-driven **Business Analyst with 4 years of experience** delivering data-driven, regulatory-compliant solutions across **BFSI** and enterprise **banking environments**. Proven expertise in **requirements engineering**, **process optimization** (BPMN, AS-IS/TO-BE), **Agile** delivery, and **UAT management**, partnering cross-functionally to translate complex business needs into **scalable solutions**. Strong analytical background in **SQL**, **Power BI, and Excel**, enabling high-impact **KPI reporting**, **data validation**, and decision support for senior leadership. Adept at core **banking migrations**, **RTM ownership**, **API validation**, and **stakeholder management**, with a consistent track record of improving operational efficiency, delivery predictability, and customer-focused outcomes.

Technical Skills

- Programming Languages : SQL, , VBA,
- Requirement Management : JIRA, Confluence, Azure DevOps
- Database Technologies : MySQL, SQL Server, MS Access
- Agile & Project Management : JIRA, MS Project
- Development Methodologies : Agile (Scrum), Waterfall, Hybrid
- API Testing Tools : Postman, Swagger
- Version Control Systems : Git GitHub
- Process Modeling : BPMN, Use Case Diagrams, Activity Diagrams, Wireframes
- Data Analysis & Visualization : Microsoft Excel, Power BI, Google Sheets
- Modeling & Documentation : Microsoft Visio, Lucidchart, Draw.io, Balsamiq
- ERP & CRM Tools : Salesforce, Microsoft Dynamics
- BI & Reporting Tools : Power BI, SSRS, Excel Dashboards
- Documentation : Confluence, SharePoint, Google Workspace, MS Office

Professional Experience

Tata Consultancy Services, Pune — **Business Analyst** — **May 2022 – Present**

Project Name: PNC Bank Project | Client name: PNC Bank

Roles and Responsibilities

- **Led end-to-end business process analysis and optimization** using BPMN, AS-IS/TO-BE models, driving **18% efficiency improvement** across enterprise banking workflows.
- **Elicited and translated complex business and regulatory requirements** into **BRDs**, **FRDs**, **user stories**, and acceptance criteria, ensuring **100% SDLC traceability**.
- **Designed and delivered executive KPI dashboards and analytical reports** using **Power BI, SQL**, and Excel, improving **data-driven leadership decisions by 30%**.
- **Managed full requirements lifecycle in Agile environments** using **JIRA, Azure DevOps**, and MS Project, improving **sprint velocity and delivery predictability by 20%**.
- **Performed data analysis and validation using SQL and Excel models** to identify trends, gaps, and root causes supporting continuous process improvement.
- Built and maintained **Requirements Traceability Matrix (RTM)** to ensure complete alignment between business requirements, development deliverables, testing, and production releases.
- **Solved complex, large-scale business problems** by analyzing cross-system dependencies and data insights to design **scalable, low-risk enterprise solutions**.
- Supported **UAT planning** and execution, coordinating **test scenarios**, business validations, defect triage, and sign-offs to ensure production readiness and minimal post-release defects.
- **Acted as a strategic liaison between business and technology teams**, aligning functional requirements with technical feasibility, scalability, and compliance standards.
- **Created and maintained enterprise-grade documentation** including process flows and governance artifacts using Confluence, SharePoint, Visio, and Lucidchart for audit readiness.
- **Facilitated stakeholder workshops and governance reviews**, driving alignment and change management while reducing **rework by 25%** through structured decision-making.

Project Name: Citi Bank | Client name: Citi Bank

Roles and Responsibilities

- **Owned end-to-end requirements** for core **banking migration, translating regulatory** needs into **BRDs, FRDs**, use cases, and wireframes with full traceability.
- Executed large-scale data validation using **SQL** and advanced **Excel reconciliation**, **achieving 99.8%** accuracy and supporting compliant, zero-defect banking migrations.
- Partnered cross-functionally with **Product, Engineering, QA,** and Compliance to define user stories and acceptance criteria aligned with scalability and risk controls.
- Led **UAT execution** and defect management in **JIRA**, **coordinating triage** and resolution to reduce defect leakage by 28% and accelerate sign-offs.
- Validated **REST APIs** using **Postman** and **Swagger** to ensure integration readiness, **data contract accuracy**, and downstream system compatibility across platforms.
- Maintained end-to-end **requirements traceability** and version control using **Git** and **GitHub**, aligning business **requirements** with technical implementations and releases.
- **Facilitated backlog prioritization** and refinement sessions using data-driven value scoring to optimize sprint commitments and release outcomes.
- **Created clear process flows**, system diagrams, and documentation to simplify **complex banking workflows** and enable data-driven, customer-focused decisions.
- Collaborated with **QA teams** to validate test coverage and **acceptance criteria**, ensuring alignment with **business rules**, regulatory compliance, and customer expectations.

Education

Savitribai Phule Pune University Bachelor of Engineering | CGPA: 7.6 | July 2016 – May 2019
