YOGESHWAR PATIL

QA Automation Engineer | Java | Selenium WebDriver | TestNG | Cucumber BDD | REST Assured | API Testing
Pune, Maharashtra | +91 96044 35225 | yogeshwarp111@gmail.com | linkedin.com/in/yogeshwarpatil-sdet

PROFESSIONAL SUMMARY

QA Automation Engineer with 3+ years of experience in software testing and test automation, specializing in Java, Selenium WebDriver, TestNG, Cucumber BDD, REST Assured, and API testing. Experienced in designing, developing, and maintaining scalable automation frameworks using Page Object Model (POM) and reusable automation components. Experienced in working in Agile/Scrum environments, collaborating with developers, business teams, and cross-functional stakeholders to identify defects, improve test coverage, and deliver high-quality software

TECHNICAL SKILLS

Test Automation & Frameworks:
Selenium WebDriver (Java) | Playwright | TestNG | Cucumber BDD | Page Object Model (POM) | Data-Driven Framework | Hybrid Framework

API & Database Testing:
REST Assured | Postman | SQL/MySQL

CI/CD & Build Tools:
Jenkins | Maven | Git/GitHub

Programming Languages:
Java | SQL/MySQL

Testing Methodologies:
Functional Testing | Regression Testing | Smoke Testing | Sanity Testing | Integration Testing | UAT | Exploratory Testing | Test Case Design | RTM

Defect Management & Tools:
JIRA | Redmine | Bug tracking | Defect lifecycle management

Process & Methodologies:
Agile/Scrum | SDLC | STLC | Sprint Planning | Backlog Grooming | Daily Standups | Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

QA Automation Engineer · Deepak Cybit Pvt. Ltd., Pune
Mar 2023 – Present

Test Automation Framework Design

- Developed and maintained Java-based Selenium WebDriver and TestNG automation frameworks using the Page Object Model (POM) for multiple enterprise applications.
- Automated complex business workflows including role-based access, approval workflows, multi-stage processes, and end-to-end user journeys.
- Implemented robust synchronization strategies using explicit waits and dynamic element handling, improving automation stability and reducing test failures caused by synchronization issues.
- Developed reusable test utilities and framework components to improve test maintainability, scalability, and execution efficiency.

API Testing & Backend Validation

- Developed automated API test cases using REST Assured for GET, POST, PUT, and DELETE operations, validating status codes, response payloads, headers, and JSON fields.
- Performed API testing using Postman, including environment variables, request chaining, pre-request scripts, and response validations across different environments. Performed SQL-based database validation using joins, subqueries, aggregations, and data comparisons to verify backend data integrity.
- Validated data consistency across UI, API, database, and integrated application layers.

Manual Testing & Defect Management

- Designed and executed test scenarios, test cases, test plans based on business requirements and user stories.
- Performed functional, regression, integration, exploratory, UAT, and end-to-end testing across web-based applications.
- Performed exploratory testing to identify edge cases, functional gaps, UI issues, data inconsistencies, and workflow-related defects beyond defined test scenarios.
- Logged and tracked defects in JIRA with detailed reproduction steps, expected and actual results, severity, priority, environment details, and supporting evidence.

- Collaborated with developers and business stakeholders for defect analysis, root-cause investigation, retesting, and closure verification.
- Participated in Sprint Planning, Daily Stand-ups, Sprint Reviews, and Retrospectives, contributing to testing estimates, risk identification, and release readiness.

KEY PROJECTS

Meeting Management System (MMS) – Government Enterprise Application

- Automated end-to-end meeting workflows including meeting creation, participant assignment, agenda setup, meeting execution tracking, MOM (Minutes of Meeting) generation, and action item closure.
- Designed and executed comprehensive test cases for role-based access control covering meeting organizers, participants, and approvers; verified permission boundaries across deliberation, recommendation, and approval phases.
- Automated REST API tests for meeting state transitions, document management operations, and digital signature endpoints; validated API contracts and response accuracy.
- Executed regression testing on MOM auto-generation logic, action item tracking functionality, and document management modules; verified accuracy of generated minutes against meeting deliberation records using manual checks and SQL queries.

Competency Profiler – Banking & Learning Management Application

- Automated assessment workflow testing covering assessment creation, user assignment, assessment window management, question delivery, score calculation, and result publication processes.
- Designed and executed test cases for role-based assessment configurations at different organizational levels; verified conditional question visibility, scoring rule application, and certification eligibility logic with zero permission boundary violations.
- Automated REST API tests for assessment data retrieval, score synchronization, and performance report generation endpoints; validated data consistency across modules.
- Executed UAT support activities including test scenario preparation and stakeholder feedback collection; ensured all issues were resolved before production deployment.

Athena ELN – R&D Management Software (Internal SaaS/Enterprise Product)

- Performed end-to-end manual and automation testing across the R&D lifecycle, covering Idea Management, Paper Evaluation, Scouting Experiments, Optimization, Pilot Trials, and Commercial Trials.
- Automated and validated complex Stage-Gate approval workflows, including promotion requests, reviewer notifications, approval/rejection routing, and workflow status transitions.
- Tested role-based access control for Manager, Contributor, Observer, and Stage Approver roles across modules and data views.
- Executed regression testing for dashboard analytics, project matrices, stage-wise metrics, manager/geography breakdowns, and PDF export functionality, validating results against backend data.
- Identified, documented, and tracked integration and data-linkage defects through JIRA, followed by retesting and verification of fixes.

EDUCATION

PG Diploma in Advanced Computing (PG-DAC) · 2022 | 62.88%
C-DAC, New Delhi | Specialization: Software Testing & Full-Stack Development

B.E. – Chemical Engineering · 2021 | CGPA: 7.75
Sir Visvesvarya Institute of Technology, Nashik

CERTIFICATIONS & ACHIEVEMENTS

- C-DAC PG-DAC – Advanced Computing | Software Testing & Full-Stack Development | 2022
