Total work experience
3 Years 2 Months

KEY SKILLS

- Frontend Development
- PostgreSQL
- API development
- RESTful APIs
- Git
- Authentication (JWT/OAuth)
- CI/CD
- Microservices
- Docker
- MySQL
- azure
- Python
- Django
- Flask
- Python Development
- Django Rest Api
- SQL
- React.js
- HTML

PROFILE SUMMARY

Experienced Python Backend Developer with 3+ years of hands-on experience in designing, developing, and maintaining scalable web applications and microservices. Proficient in Python, Django, Flask, RESTful APIs, MySQL, PostgreSQL, Docker, Jenkins, Git/GitHub, and Azure Cloud. Strong expertise in backend architecture, database design, API development, authentication (JWT/OAuth), and CI/CD pipeline implementation. Currently working at Gavkari Agro Producer Company Limited, where I develop high-performance backend services, optimize database operations, and build secure REST APIs for enterprise applications. Successfully improved application performance through query optimization, caching strategies, and automation of business processes. Experienced in delivering end-to-end solutions for finance and lending domains, including loan management systems, customer onboarding workflows, and payment integration platforms. Skilled in collaborating with cross-functional teams, debugging complex

Size: 8 Members Project Description: Mahanidhi Loan Application is a microservices-based lending platform designed to support web, Android, and iOS applications. The platform enables customer onboarding, loan application processing, document verification, loan approval workflows, repayment tracking, and integration with third-party services. The system is built to handle high transaction volumes while maintaining scalability, security, and high availability. Responsibilities: - Developed and maintained backend microservices using Python, Django, and Flask. - Designed and implemented RESTful APIs for customer onboarding and loan processing. - Created database schemas and optimized PostgreSQL queries for efficient data management. - Integrated third-party services for verification, notifications, and payment processing. - Managed Docker-based deployments and CI/CD pipeline

550 Days

Cab Service Provider

Project Name: Cab Payment & Loan Collection Integration System Client: Mahindra Finance Duration: May 2023 — November 2024 Role: Python Backend Developer Team Size: 6—8 Members Project Description: Developed a payment integration platform that enabled cab service payments to be automatically linked with Mahindra Finance's loan collection system. The application processed payment transactions, validated customer data, maintained loan repayment records, and generated reports for financial operations. The system was designed to handle secure transactions, high-volume requests, and seamless integration with external financial services. Responsibilities: - Designed and developed RESTful APIs using Python and Django. - Implemented business logic for payment processing and loan repayment tracking. - Designed and maintained PostgreSQL database schemas and queries. - Integrated third-party financial and payment services. - Optimized API performance through query tuning and caching mechan
