MASANI SUNIL KUMAR

Full Stack Developer

(+91) 7013429743 | sunil.m0711@gmail.com | linkedin.com/in/masani-sunil-kumar | github.com/masanisunil | Bengaluru, India

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 1+ year of hands-on experience designing and deploying scalable web applications and cloud-based solutions. Proven expertise in backend development, frontend engineering, REST and tRPC API integration, and database optimization using Python, Node.js, React.js, Django, Flask, and PostgreSQL. Skilled in AWS cloud services and DevOps tooling. Adept at delivering clean, maintainable code in monorepo and microservices architectures with a strong focus on performance and user experience.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript (ES6+), Node.js
Frameworks & Libraries: React.js, Django, Flask, Express.js, tRPC, Prisma ORM, Material UI, Redux
Databases: PostgreSQL, MongoDB
Cloud & DevOps: AWS (Cognito, SNS, Pinpoint, SES, DynamoDB, S3, Lambda, ECR), Docker, Render
Architecture: Monorepo (Turborepo), REST APIs, Type-safe API design, Microservices
Tools & Platforms: Git, GitHub, JIRA, Postman, VSCode, Zod, Jotai, TanStack Router, Logto

WORK EXPERIENCE

Junior Software Engineer | Eligere.ai — Bengaluru, India *November 2025 – Present*

- Architected and developing a full-stack enterprise platform using Node.js, Express.js, PostgreSQL, React.js, tRPC, Prisma ORM, and Turborepo (Monorepo Architecture).
- Designed scalable backend APIs with type-safe end-to-end integration using tRPC, eliminating API contract mismatches between frontend and backend services.
- Engineered relational database models in PostgreSQL using Prisma ORM, improving query performance and ensuring data integrity across the platform.
- Built multilingual AI-powered intelligent search to retrieve contextual troubleshooting steps, enhancing mechanic productivity and resolution speed.
- Developed dynamic dashboards and file-upload systems for dealers to submit bike diagnostics, logs, and problem reports with structured resolution workflows.
- Contributed to D&T Pro, a dual-application ecosystem connecting dealers (web portal) and mechanics (mobile app) through real-time issue reporting and troubleshooting workflows.
- Optimized application performance within Turborepo monorepo, maintaining reusable shared packages and clean architecture across multiple services.

Full Stack Developer | Sujanix Private Limited — Bengaluru, India *October 2024 – October 2025*

- Architected and developed backend services for True Read Analytics (Bihar Electricity Board) using Django and React.js, significantly improving data processing efficiency and system reliability.
- Enhanced the CRUX Unified Endpoint Management platform by integrating AWS Cognito for secure user authentication and AWS SNS/Pinpoint for targeted notifications and user engagement.
- Designed and implemented the backend infrastructure for TeamXcel Smart Attendance App using Python, Flask, and PostgreSQL, optimizing database queries for faster access and reduced latency.
- Developed and tested a custom Windows MDM server using Python and Flask with APNs integration, configuration profile deployment, and device command handling per the Windows MDM protocol.

KEY PROJECTS

D&T Pro — Diagnostic & Troubleshooting Platform *November 2025 – Present*

- Built full-stack enterprise platform connecting dealers and mechanics through a structured troubleshooting ecosystem consisting of a web portal and mobile application.

- Developed scalable backend services using Node.js and Express.js with PostgreSQL as the primary database within a Turborepo-based monorepo architecture.
- Implemented end-to-end type-safe API communication using tRPC, ensuring seamless frontend-backend integration with Zod schema validation.
- Developed dynamic, responsive React.js frontend with Jotai state management and TanStack Router for efficient routing and navigation.
- Integrated multilingual AI-powered intelligent search enabling mechanics to rapidly retrieve relevant troubleshooting steps, improving resolution efficiency.

Technologies: *Node.js, Express.js, React.js, PostgreSQL, Prisma ORM, Zod, TanStack Router, tRPC, Logto, Turborepo*

True Read Analytics — Bihar Electricity Board

May 2024 – October 2025

- Developed high-performance backend system for electricity data analytics using Django REST Framework and React.js, processing large volumes of metering and consumption data.
- Architected and maintained backend systems, optimized data processing workflows, and improved overall system reliability for a government utility client.

Technologies: *Python, Django, React.js, PostgreSQL*

TeamXcel Smart Attendance Management System

November 2024 – April 2025

- Built full-stack web application to streamline employee attendance and project tracking using Flask, PostgreSQL, and React.js.
- Designed dynamic dashboards to visualize team activity, working hours, outage hours, punctuality, and attendance trends.
- Implemented advanced geo-fencing using circular, polygonal, and administrative boundaries for precise and secure location-based check-ins with real-time monitoring.
- Developed role-based access control, leave management, custom reporting, and alert systems for early/late check-ins within office hierarchy and project assignments.

Technologies: *Python, Flask, PostgreSQL, React.js, GeoJSON, REST API*

EDUCATION

Bachelor of Technology — Computer Science & Engineering *CGPA: 9.4 / 10.0*
Chadalawada Ramanamma Engineering College, Tirupati

Intermediate (MPC) *95%*
Pragna Junior College, Allagadda

SSC (Class X) *CGPA: 9.3 / 10.0*
B.B.R English Medium School, Allagadda

CERTIFICATIONS & TRAINING

- Full Stack Web Development — Py Spiders Institute
- Python for Data Science — Udemy
