PROFILE SUMMARY

Dynamic Python Backend Developer with 3.2 years of hands-on experience in designing and delivering high-performance backend solutions using Python, Django, and RESTful APIs. Highly proficient in PostgreSQL/MySQL, ORM frameworks, and building secure authentication and authorization systems using DRF and JWT. Strong understanding of backend architecture, API design, and scalable system development. Dedicated to writing clean, scalable, and maintainable code while contributing effectively in fast-paced environments.

CORE SKILLS

Python
Django
Django REST Framework (DRF)
FastAPI
RESTful APIs
React.JS
Javascript
MySQL
PostgreSQL
SQLite
JWT
API Versioning
Rate Limiting
Request Validation
Celery
Redis
Docker
CI/CD (Jenkins/GitHub Actions)
Nginx
Gunicorn /Uvicorn
AWS
Git & GitHub
Linux
Shell Scripting
Swagger / OpenAPI
Postman
Logging & Monitoring
GitHub copilot
ZIRA

PROFESSIONAL EXPERIENCE

Python Backend Developer **May** 2023 – Present

- **Programming Languages :** Proficient in Python (Python3)
- **Python Backend :** Strong understanding of core Python concepts, OOP principles, exception handling, modules, and packages
- **Frameworks :** Proficient in Django and Django REST Framework (DRF)
- **Web Services :** Skilled in developing RESTful APIs, handling request/response cycles, and working with JSON
- **ORM :** Hands-on experience with Django ORM for efficient database interactions and migrations
- **Database :** Experience working with PostgreSQL and MySQL, including schema creation,writing queries , and optimizing database interactions.
- **Authentication & Security :** Strong understanding of API security,including JWT authentication, session-based authentication, and DRF permissions
- **Version Control System :** Proficient in Git and GitHub for version control, branching strategies, and collaborative development
- **Build & Dependency Tools :** Experience with pip, virtual environments (venv), and pipenv / poetry for dependency management
- **IDEs & Development Tools:** Skilled In using PyCharm and VS Code for development, debugging, and API testing
- **Deployment & Cloud :** Experience deploying applications on AWS and containerizing applications using Docker
- **CI/CD :** Familiar with Jenkins and GitHub Actions for building CI/CD pipelines
- **API Integration :** Experience integrating third-party services such as SMS gateways, email services, and external APIs

TapQwik | Python Backend Developer

Project : Hotel Booking System — (Python, Django REST Framework, MySQL, JWT)

Developed a production-style hotel booking platform with two interfaces — a user portal for customers to search and book hotels, and an admin dashboard for hotel owners to manage properties, rooms, pricing, and bookings.Built a fully API-driven backend using Django REST Framework with modular endpoints for authentication, hotel/room management, real-time availability, reviews, and secure bookings.Implemented transaction-safe booking logic to prevent double booking, role-based authorization, and JWT-based authentication.Designed optimized search filters and a scalable database architecture using PostgreSQL.Integrated third-party services including payment gateway, SMS/Email notifications, and hotel location services.Containerized the application using Docker and ensured high performance, security, and clean API architecture.

Technologies Used :

Backend : Python, Django, Django REST Framework
Database : MySQL
Authentication : JWT
Async Processing : Celery, Redis
DevOps : Docker, AWS
Version Control : Git, GitHub
API Testing : Postman

Roles and Responsibilities:

- Built high-performance, scalable REST APIs using Django and Django REST Framework (DRF)
- Developed and maintained core modules including hotel management, room inventory, booking workflows, pricing, customer management, and reviews.
- Implemented secure authentication and authorization using JWT and custom middleware
- Designed and optimized PostgreSQL databases leveraging Django ORM for efficiency and scalability
- Wrote complex, optimized queries and managed relational data models to ensure high system performance
- Integrated third-party services such as SMS, email, payment gateways, and external APIs
- Implemented asynchronous background processing using Celery and Redis for alerts and bulk notifications
- Containerized applications with Docker to ensure consistent development and deployment environments
- Supported cloud-based deployments, including AWS infrastructure and workflows
- Used Git/GitHub for version control, feature branching, pull requests, and collaborative code reviews
- Improved system reliability and stability through centralized logging and robust error handling
- Actively collaborated in Agile/Scrum teams, participating in stand-ups, sprint planning, and retrospectives
- Wrote clean, maintainable, and scalable code following industry best practices and coding standards
- Performed API testing, debugging, and validation using Postman and DRF Browsable API
- Integrated multiple third-party services and external APIs, including SMS gateways, email services, payment gateways, and enterprise systems
- Prepared and maintained API documentation using Swagger/OpenAPI for seamless frontend and third-party integration.
