SUMMARY

Results-driven Production/Application Support Engineer with 11 years of comprehensive experience in the Healthcare, Retail, and Reward Management industries. Expertise in Oracle SQL, Unix, Shell Scripting and job scheduling tools like Control-M and ticketing tools like Jira, ServiceNow, Workfront and knowledge on creating KB Articles in Service now and under Confluence and Basic AWS, Basic Snowflake, ETL processes, and the MS Office Suite. Adept at identifying and resolving production support issues, ensuring seamless operation, and optimizing Application Support engineering workflows. Demonstrated success in maintaining data integrity, performance tuning, and streamlining support operations. Eager to leverage a robust technical skill set and industry knowledge to drive operational excellence and contribute meaningfully to a forward-thinking organization.

EXPERIENCE

Lead Application Support Engineer
Sonata Software | 9/2024 – Present

- ERMA is a web-based Electronic Health Record (EHR) specifically designed to manage patient data and operational information in complex environments like jails and treatment facilities.
- Managed EMR (ERMA), an inbuilt application of Well Path, storing detailed patient records.
- Coordinated with JMS tool to send data to ERMA.
- Integrated POCC tool for client use in recording and syncing patient medication data with ERMA.
- Utilized EHR to track patient records within ERMA.

Roles and Responsibilities:

- Resolved L2 ServiceNow tickets by collaborating with Infrastructure, Product, and Delivery teams to ensure rapid issue resolution and minimal client impact.
- Consistently met or exceeded **SLA targets** by managing a high volume of L2 tickets and monitoring key performance indicators (KPIs) within ServiceNow.
- Facilitated bridge calls with clients and cross-functional stakeholders to address and resolve complex escalated issues.
- Authored comprehensive **Knowledge Base (KB) articles** for newly identified system issues, reducing future resolution times for the support team.
- Monitored application server health and automated bot processes to manage access for high-level medical accounts, ensuring **99.9% system availability**, including Oracle SQL, SQL Server, ServiceNow, SFTP, checks the Server and services of Application
- Managed server performance and high availability through proactive administration, including overseeing start/stop procedures and routine maintenance.

SKILLS

- Root Cause Analysis
- Effective communicator
- Technical issues analysis
- Technical leadership
- Troubleshooting proficiency
- SSH, SMTP, File Encryption, Decryption
- Coding
- PL/SQL
- UNIX
- Basic Python
- Oracle SQL
- Snowflake DB Basics
- Knowledge on Networking.
- ITIL Knowledge
- ETL
- Jira
- LINUX
- Process automation

EDUCATION

B.E.: Computer Science and Engineering, 2014
AIET, Affiliated by VTU Belgaum - Gulbarga, KA, INDIA

12th: Science, 01/2010
CPMS - Gulbarga, KA, INDIA

10th, 01/2008
MGM School - Gulbarga, KA, INDIA

- Generated daily system health reports and performance summaries using **Excel and PowerPoint**, providing leadership with actionable data-driven insights.

Senior Application Support Engineer
Fortrea Development India | **06/2023 – 08/2024**

Supported Xcellerate Platform in the Healthcare Domain
Roles and Responsibilities:

- Resolved complex data access and file loading issues, rectifying discrepancies to ensure 100% data integrity and seamless operations.
- Orchestrated Incident and Problem Management workflows to minimize system downtime and maintain service continuity.
- Resolved technical escalations for internal and external stakeholders, maintaining high satisfaction ratings through timely communication.
- Partnered with diverse technical teams to accelerate issue resolution and optimize end-to-end workflows.
- Executed data modifications via formal Change Requests, ensuring full compliance with accuracy and industry standards.
- Led task allocation and provided technical mentorship to team members to resolve high-priority bottlenecks.
- Developed a comprehensive knowledge base of incident resolutions to reduce future response times and facilitate knowledge sharing.
- Managed application servers, including start/stop operations, to ensure optimal performance and high availability.

Technologies used: Oracle SQL, SQL Server, Service Now, Putty, Jira, Snowflake DB, AWS, Axway, Job Scheduling Tool (Control-M), SSH, ITIL, Java Debugging knowledge, GitHub, Confluence, Basic Python, Unix.

Application Support Analyst, 09/2019 - 05/2023
Bread Financial - Bengaluru

Loyalty Rewards Program Creation Project
Roles and Responsibilities:

- Worked closely with clients to gather and understand their requirements, ensuring that the loyalty rewards programs aligned with their business goals.
- Designed and implemented loyalty rewards programs using Workfront tools, including transaction codes, general ledger codes (GLs), and other relevant codes, to ensure seamless operation.
- Conducted rigorous testing in a greenscreen environment before production rollout to ensure accuracy and functionality. Validated first event checks to guarantee accurate points calculation for client transactions and confirmed point triggers in the production environment.
- Investigated and resolved incidents and problem tickets related to the loyalty program, addressing issues such as missing data and other job-related concerns.
- Performed file validation for onboarding clients, including well-known brands like B&B and Victoria's Secret, ensuring data accuracy and smooth integration into the loyalty rewards system.
- Maintained data integrity and ensured adherence to governance standards, contributing to overall data governance processes.
- Developed and implemented small scripts for automating data checks, streamlining the process and improving efficiency.

Technologies used: Microsoft SQL, Service Now, Jira, Job Scheduling Tool (Control-M), Workfront, MS Suites, Confluence.

Production Support Tech Advisor, 02/2015 - 08/2019
IQVIA - Bengaluru, INDIA

Project: Clinical/Patient/Prescription Data Mart Project
Roles and Responsibilities:

- Identified, diagnosed, and resolved software issues to ensure products functioned as expected.
  Collaborated closely with team members to address and resolve issues promptly, minimizing downtime and maintaining system integrity.
- Analyzed metrics, logs, and debugging tools to identify and understand system failures or performance issues.
  Proposed and implemented solutions to enhance software performance, contributing to the overall stability and efficiency of the platform.
- Maintained comprehensive and up-to-date documentation of systems, procedures, and relevant technical information.
  Recorded every problem encountered in the production environment, creating a valuable knowledge base for future reference.
- Developed tools and internal software to automate processes and gather customer feedback, driving improvements in both efficiency and user experience. Actively participated in all phases of new feature implementation, including design, development, testing, and deployment.

Technologies used: Oracle SQL, SQL Server, Service Now, Putty, Jira, Job Scheduling Tools, ETL, SSH, Encryption and Decryption, SFTP and FTP
